TRILOGIC

A Touch of Magic

the expert

WITH ESM

SPECIAL PRICE
NOW

ONLY £29.99

Complete with V3.1 Software **FREE POST**

**NEW!
LOW
PRICE**

NOW INCLUDING THE LATEST
V3.1 SOFTWARE UPGRADE!

IT CAN NOW DO ALL THIS!

1 PROGRAM PARALYSER

Stops even the most HEAVILY PROTECTED PROGRAMS AND DEFEATS ALL "anti-freeze" techniques

2 BACK-UP GENERATOR

TAPE/DISK . DISK/TAPE . DISK/DISK. TAPE/TAPE. Transfers memory resident programs whether loaded from disk or tape.

3 SPRITE EXTRACTOR

Displays the sprites for you to edit, and then save, or RESTART the game using your customised ones. You can view the animation too.

4 SPRITE IMMORTALISER

This feature disables the sprite collision detection — prolongs active sprites.

5 HIRES SCREEN GRABBER

Saves a HIRES screen and then alter it using one of several utilities widely available.

6 CHEAT MACHINE

The easy way to enter cheats and "pokes". Gain extra lives, or infinite energy, etc., etc.

7 CODE INTERROGATOR

A truly professional machine-code monitor, operating over all 64K Ram, with disassemble, compare, transfer, fill, assemble, hunt, search, modify, jump, number conversion, etc. PLUS, B command lists BASIC & R restarts a program.

**8 AND IT'S ...
THE ONLY
PROGRAMMABLE
CARTRIDGE**

You'll NEVER need to return the cartridge for upgrading — simply send for the latest software — only £2.00 exchange disk or tape. We calculate that you could buy and EXPERT and several upgrades for what it will cost you to upgrade rival products.

9 PRINTER DUMP

Prints out exactly as shown on screen — high & low res. — works with serial printer.

10 EXPERT EXPRESS

Use your EXPERT as a disk turbo cartridge to speed up disk loading.

11 ICON DRIVEN

Operating system improved and even more powerful machine code monitor. Help key. Dual screen facility.

And we haven't forgotten advanced users
There is now a 2 Pass Assembler
& Label Generating Disassembler included.

NEW

THE EXPERT UTILITY DISK

- Specific multi-part back-up utilities
- Additional operating systems
- Fast file copier etc. etc.
- Monitor with print command.

32k
ONLY **£39.95**

The
Perfect
Partner for
Your Expert.
(with V3.1)

The EXPERT RAM PACKS are designed for use with the EXPERT cartridge and can be used to store several operating systems thus avoiding the need to load and reprogram disk or tape. They can also be used as general purpose memory packs ('rams disks') using software presently under development so that for example, you could save the current program in a battery back-up version ready for instant use. Another use would be to 'switch' from one program to another at the press of a key.

These ram packs, when combined with the EXPERT make the ideal software developers tool; further developments on this theme will be announced soon.

Television Tie-ins

There has been a sudden spurt of TV related titles in the last few weeks.

First, Mosaic Publishing is launching *Yes Prime Minister*, a game launched on one of the most popular comedy programs of recent years.

The player takes the part of Jim Hacker and must raise his standing in the polls during five days of turmoil and crises.

The game is available on C64 cassette at £14.95 and disk at £19.95.

TV games, Domark's new label, has announced the launch of three new titles for the C64. All based on popular television shows, the games are *Countdown*, *Bullseye* and *Treasure Hunt*, and all feature many of the familiar aspects of their counterparts on the box. All will cost £7.95.

Touchline:

Mosaic: Gorley Firs, South Gorley, Fordingbridge, Hants SP6 2PS. Tel: 0425 57055.

Domark: Domark House, 22 Hartfield Road, Wimbledon, London SW19 3TA. Tel: 01 947 5622.

Sport for All

Electronic Arts has recently released a whole host of sports games for the C64, so here's a quick run down of what's available.

Skate or Die is on C64 cassette (£9.95) and disk (£14.95). It's a skateboard simulation in which you have to compete in five different competitions. The contests are modelled on real championships and feature events like Ramp Freestyle, Downhill Race and Ramp Hill Jump.

Mini-Putt for the C64 (cassette £9.95 and disk (£14.95) is a crazy golf game in which nothing is as it seems. A smooth green can suddenly come to life and gobble your golf ball!

Test Drive is a driving simulation which lets you experience the thrill of driving some of the world's top cars including a Ferrari Testarossa and a Lamborghini Countach. The simulation displays the interior of the

car and the road to give the feel of a real test drive and the object of the game is to drive sections of the road within a given time limit.

Test Drive is available for the C64 at £9.95 cassette and £14.95 disk and is also out on the Amiga at £24.95.

Commodore has announced the release of an Amiga *Sports Pack* and a Commodore 64 *Sports Pack*. Each pack contains an assortment of sports games, a full size canvas bag and a 'Win a day at Chelsea' competition.

DATA STATEMENTS

Generally Speaking

The UK's first Technology Graduate Recruitment fair is to be held at the Novotel, Hammersmith 8-9 January 1988.

Chris Boon, of organisers Intro UK, said: "Since launching the fair, we have been very pleased by the initial take up of stands." Companies committed to appearing include Barclays' Bank, TSB, Dow Chemical, Thames Water Authority and Rank Xerox.

Exhibitors are hoping to attract graduates with technology and computing backgrounds at the specialist event.

Also relevant to those interested in computers, is the Data Protection Act 1984. The final elements of the Act came into force in November and will affect everyone in the UK.

For the first time, every man, woman and child has the legal right to see what is held on computer files about themselves and where appropriate to have the information corrected. It also gives individual the right to compensation under certain circumstances.

Lives can be seriously affected if inaccurate data is held about individuals. For instance, credit worthiness could be undermined or employment prospects blocked.

For further information about the Act and your rights under it, contact the Office of the Data Protection Registrar at the address in Touchline.

Touchline:

Amiga News

The Amiga 500 has been reduced in price by Commodore to £499.99 including VAT. The announcement came recently after weeks of speculation over the pricing of the Amiga 500, the smallest machine in the Amiga range.

Boxed with the computer, and inclusive in the price, are *Deluxe Paint* from Electronic Arts and *The Very First* tutorial pack.

Tom Hart, National Sales Manager Consumer Products Division, said: "We believe that £499.99 inclusive of VAT offers a significant incentive to the consumer during the Christmas period and the months ahead. This is the only price change both are for the remainder of 1987 and for the foreseeable future."

Software is still being launched thick and fast for the Amiga range, a large percentage coming from US companies. Electronic Arts is no exception, having recently announced the arrival of four new Amiga products.

Three of these are musical. *Instant Music* (£24.95) allows even a novice to compose and play impressive sounding pieces. The program uses a non-standard form of musical notation which, it is claimed by EA, is exceptionally easy to read and a remarkable user interface to make creating music as easy as possible. Nor will *Instant Music* ever let the user play out of tune or out of rhythm.

The two other musical products are library disks to accompany *Instant Music*. These are: *It's Only Rock 'N Roll* and *Hot and Cool Jazz*. Both will retail at £9.99.

The fourth EA Amiga release is *Earl Weaver Baseball* a sports simulation co-written by two top

baseball managers Earl Weaver and Eddie Drombrower.

The arcade mode of the game is a challenging sophisticated simulation which features high resolution graphics and realistic digitised sound. However, there is a major strategic element to the game, in that players can step into the manager's shoes to set line-ups, trade and draft players, yank pitchers and outwit a variety of opponents including Earl Weaver himself. Players also get the chance to design their own baseball park. The game is priced at £24.95.

Sentinel Software has announced a price reduction for the *Word Perfect Amiga* word processor. Formerly £255, the program will now sell at £199.

Sentinel is also continuing its trade in offer to *Scribble* owners. Anyone currently using *Scribble* can obtain a £50 refund off the cost of *Word Perfect Amiga*. Simply send your old master disks and manual with a copy of your invoice for *Word Perfect Amiga* to Sentinel Software at the address in Touchline and you will get a £50 refund.

Electronic Arts: Langley Business Centre, 11-49 Station Road, Langley, Near Slough, Berks SL3 8YN. Tel: 0753 49442.

Sentinel Software: Wellington House, New Zealand Avenue, Walton-on-Thames, Surrey KT12 1PY. Tel: 0932 231164.

In the Arcade

Domark, always on the lookout for big licensing deals, has just released a C64 version of *Star Wars*. The game is a conversion from the original licensed Atari coin-op game and bears a close resemblance to it.

You select your own difficulty level and then you're placed in charge of an X-wing fighter and are ready to fight the forces of the evil Darth Vader. The C64 cassette version is £9.95, and the disk version is £19.95.

Richard Hanson, Managing Director of Superior Software gets to grips with *Bonecruncher*.

Domark is also planning future games based on the films *The Empire Strikes Back* and *The Return of the Jedi*.

Octapolis is a new arcade game from English Software. Set in the year 3987 the small planet of Octapolis is faced with the might of the Imperium. Luckily a secret weapon is available, enormous mental power. No enemy ship could approach and expect its crew to remain sane and sensible.

However the Imperium secret service has been trying to find a space pilot who would penetrate the zone around the planet and find a way through, so that Octapolis could be wiped out. Now a hero has been found and it's you.

Game features include split screen two way perspective scrolling, 40 detailed play areas and sound effects to match. It costs £9.95 for C64 cassette and £12.95 for the disk.

Imagine has released *Freddie Hardset*, an arcade action game for the C64 (£8.95 cassette and £12.95 disk). The game originated from Spanish software house Dinamic.

Freddie Hardset is a counter-espionage agent, skilled in martial arts and laser weaponry. However, Freddie habitually drinks too much and one night manages to crash his space ship on an enemy planet. The only way he can escape is to hi-jack an enemy space ship without being killed by human-reptile mutants, immune to laser fire.

Mirrorsoft has released a new Tony Crowther game for the C64 on disk (£12.95) and tape (£9.95). The game is called *Zig Zag* and is set in the twelfth dimension. As a trainee space pilot, you must face the ultimate challenge, the Matrix of Zog. Created to find the supreme space pilot, it has yet to fulfil

its purpose. Your aim is to find the eight crystals of Zog and escape to what lies beyond the Matrix.

As an incentive to would-be super-pilots, Mirrorsoft is offering a ghetto-blasters signed by Tony Crowther to the

first five players who finish and discover the code on the hi-score table.

Superior Software is also offering prizes to accomplished games players. *Bonecruncher* is Superior's new arcade adventure for the C64 (£9.95 cassette and £11.95 disk) and the Amiga (£14.95). Bono is a baby dragon who runs a bath house in the depths of the sea for monsters fed up of stagnant water. Unfortunately, the baths attract some undesirables who love to eat baby dragon meat.

The competition can be won by anyone who finished the game. Each player who completes *Bonecruncher* successfully can claim a portable radio complete with headphone, a Bono badge and a winner's certificate.

In *Out of this World*, on the Reaktor label, you (Chuck Harison) and your C64 (an RP2-16 fighter jet) find yourselves in The Other World and have to negotiate eight levels, seven bonus levels and hostile enemy ships in order to make the enemy surrender. The game is available on cassette and disk at £9.99 and £12.99.

Electronic Arts has launched *Demon Stalker*, a one or two player arcade game for the C64.

Demon Stalker contains 99 levels of amazing mazes, all with different goals, messages, monsters and magic. And level 100 contains Calcrak the Demon, ready to battle with unwanted intruders. On each level are many useful items but you have no way of knowing if they are good or evil so be prepared to take risks. The cassette version of the game is £9.95 and the disk version costs £14.95.

Solid Gold

Go for gold in the latest in game compilations.

By Tony Hetherington

Compilations come and go and offer you a gaggle of goodies for the price of one game. They usually consist of one chart topper, two also rans and a few lemons. So the usual advice from reviewers is to buy it if you haven't already got the good game. Now US Gold has changed all that with Solid Gold, a compilation of five

great games. Now the advice is simple - buy it!

Gauntlet leads the impressive lineup that also includes the combat flight simulator *Ace of Aces*, the original version of *Leader Board*, the best of the "event" sports games, *Winter Games*, and *Infiltrator* which is a flight simulator, commando game and

arcade adventure all rolled into one.

Gauntlet took the coveted Christmas number one spot and is the conversion of the classic coin-op machine that was so popular that a slot for £1 coins was specially fitted to so players could cram in their money. The C64 version captured the excitement of the battles of a warrior,

wizard, elf and valkyrie (two at a time) against ghosts, grunts, robbers, sorcerers and the aptly named deaths as they bravely delve deeper into the dungeon.

A staggering 512 levels packed with monsters and mayhem lay ahead as they search for treasure, keys to open doors, magic potions, amulets of invisibility and food to top up their health points. As monsters munch you and poisons drain you then the health points are lost. Run out of health points and you run out of game.

Gauntlet is a fast and furious game that's played in a state of semi-controlled panic by players that once bitten, are hooked for hours and hours. Un doubtedly, the pick of the coin-op conversions.

Ace of Aces takes you to the skies in the pilot seat of a Mosquito fighter bomber. The game begins in the briefing room where you can choose to bomb a POW train carrying prisoners to Berlin, attack submarines before they escape to the open sea, deflect V1 rockets from their deadly course to London or dogfight with a squadron of 109's. If you want to become the Ace of Aces you will have to attempt all four at once!

Once airborne you certainly have your work cut out as you have to plot your course to that target, control both engines, select between guns, rockets and bomb weapons and fight off attacking ME109's.

Leader Board was the first of a series of four golf games from Access, the people who brought you subtle games such as the screaming Beach Head II and Raid over Moscow. Despite the lack of chaos and killing (the normal Access trademarks) the Leader Board courses can be vicious particularly to novice golfers.

Unlike other golf simulations that pontificate over club selection and fine angles **Leader Board** is a LOAD and go game.

Hit and Hope tactics seem to work as well as any other which makes it a real games players game which probably explains why it shot straight into the number spot in the charts.

The courses are a bit limited and consist of islands set in a massive lake so if you manage to stay out of the drink you'll probably get a good score. If you enjoy **Leader Board** then it's probably worth investing in one of its three sequels. **Leader Board Tournament** added four new but equally wet courses, the **Executive** version dried out the course and added trees and bunkers and finally **World Class Leader Board** is the definitive version complete with a top down map of each hole.

Winter Games was the third in the Epyx "Games" series that began with **Summer Games 1** and **2** and has since continued with **World Games** and recently **California Games**. **Winter Games**, another chart topper, is still my favourite.

Gruelling events push joystick athletes to their limits as they go for gold in the ice and snow.

Superb graphics form the

backdrop for events such as the ski jump and bobsled as well as the curious **Hot Dog Ariels** in which contenders must perform acrobatics while leaping off a ski slope! Skating comes in the three varieties of speed, figure and free but the most gruelling event has got to be the biathlon. This is a cross country race against time in which you must also shoot targets to get a good score and a chance of a medal. After the biathlon, the 1500m will be easy.

Last but no means least **Infiltrator** casts you as Johny "Jimbo-Baby" McGibbets as you set off in your super helicopter to save the world once again. This time the Mad Leader is up to his old tricks again and you must stop him.

In the first of three missions you must fly your Whizbang Enterprises Gizmo Attack helicopter through enemy airspace then land and infiltrate the enemies base. With only your usual toolkit of sleeping gas, false papers and gas grenades you must search the base and photograph the Mad Leader's plans and then escape back to base. This mission leads you through a combat simulator to a commando style arcade adventure and back again in one amazing game.

Each of these games is a classic in its right but together for only £9.99 they are pure solid gold.

Touchline:

Title: Solid Gold. **Supplier:** US Gold, 2/3 Holford Way, Holford, Birmingham B6 7AX. **Tel:** 021-356 3388. **Machine:** C64. **Price:** £9.99 cass/£14.99 disk.

GUNSHIP™

Gunship's revolutionary 3-D graphics enable you, the pilot, to fly into the world's hottest trouble spots . . . You'll use an unbelievable array of high tech information and weapon systems, including lasers, video cameras, night viewers, radar warnings, jammers, computers, missiles, rockets, flares and a 30mm cannon! Successful missions will be rewarded with medals and rank promotions.

GUNSHIP is available for the CBM 64/128K, Spectrum and coming soon for IBM PC and compatibles.

Byting into the 6510

This month we continue our typewriter program in machine code by adding an interrupt driven cursor and find out more about the machine stack.

By Burghard-Henry Lehman

Personally, I consider the most exciting thing about computers is their tremendous flexibility. Even though they are only machines, they are the most versatile kind ever invented. This opens the way for unlimited creativity, and at the end of the day, a computer is as good as what you make of it.

For example, you may be forgiven for thinking that since you bought yourself a Commodore 64 you are lumbered with a slow and pretty limited Basic for ever. But the moment you learn something about how flexible the machine really is, you'll find that this is only the tip of the iceberg. The deeper you get into the C64, the more you will discover that it has been designed in ways which literally beg you to make more out of it. In the end you could change your computer so completely that you could have a brand new computer every week! And this is not really as difficult as you might think. In fact, the designers of the C64 made sure of that in several ways.

In the following article we will discover a powerful way of changing your C64 considering the use of vectors.

Vectors

In the last article in this series I told you a little about the maskable interrupt which is called upon every 60th of a second and enables the computer to read the keyboard and print the flashing cursor. Now we want to use this knowledge and create our own cursor.

First of all, let's look at exactly what happens every 60th of a second.

Each time the interrupt is called the microprocessor is made to jump to the last location of the C64 which is hex FFFE or decimal 65535. Actually, it's not really jumping to this address, but using this uppermost location to find out where to jump to next. (You might like to know that all processors of the 6502 family, to which the 6510 belongs, are programmed to read the vector at \$FFFE. But from there all machines take different routes).

So this is what a "vector" is all about. It is very similar to what we have already learned when dealing with indirect addressing - the contents of two locations point the microprocessor to the address of another location.

The vector at the top of the C64 tells the 6510 to jump to a routine at hex FF48, decimal 65352. This is the start of the interrupt routine and begins with the 6510 saving the contents of all its registers and so afterwards, it can continue with whatever it was doing before. It is then made to jump via another vector.

This vector is located in RAM, at hex 0314 or decimal 782, and is the one which interests us most. Because it is located in RAM we can change it and thus make the 6510 jump to our routine, instead of the usual routine in ROM.

Driving a Wedge

Vectors are very useful because they permit flexibility in the design of a micro. When a computer first comes onto the market the operating system is seldom as fully developed as hoped. There are very often bugs present (the

people who program the operating system are just as fallible as the rest of us...). It is also very likely that the designer comes up with ideas for improved facilities.

Without vectors those changes in the operating system would mean that the whole program would have to be re-written completely. It would also mean that some of the hardware of the computer might have to be re-designed and this would result in a lot of very unhappy people who have spent their hard-earned money on a brand new micro, only to find themselves within a very short time lumbered with a machine which is hopelessly out of date. This problem can be solved by using vectors which are fixed locations, either in RAM or in ROM. All that has to be changed now is the contents of the vector location, which makes the microprocessor jump to the new or modified routine.

Vectors are also very useful to the humble programmer. If a vector is in RAM, he can change it and make the microprocessor jump to his routine instead of the one in the operating system. This is called "driving a wedge", and is used by all the extended Basic programs available for the C64.

We will also use this method, for programming our own cursor.

Turning the Cursor On

The interrupt routine which I have run into a separate source file (located at 50000 - see listing 2) consists of three routines:

- the routine, which turns our cursor on.
- the routine, which turns it off.

• the interrupt routine itself, which is called upon every 60th of a second via the vector at \$0314.

"Turning the cursor on" could sound a little misleading, as we don't infact turn anything on or off. All we do is change the vector at \$0314. But for our purpose this means, that from then on our cursor is "turned on", in the sense that the computer will now jump to our routine instead of the one in Kernal-ROM which is located at \$EA31.

Later on, when we "turn the cursor off", we will do the opposite, i.e. change the vector back to normal.

As you can see from lines 150 and 250 (and 330 and 380, respectively), I have introduced two new op-code mnemonics: "SEI" and "CLI". You may remember that in the last article I said that we are dealing with a "maskable interrupt", that is an interrupt which can be turned on and off by software.

This is exactly what "SEI" and "CLI" do: "SEI", which stands for "SEt Interrupt flag", disables the interrupt. "CLI", which stands for "CLear Interrupt flag", enables it. The interrupt flag is bit 3 of the flag register of the 6510. If this flag is clear (0), the microprocessor executes the interrupt every 60th of a second. If it is set (1), it doesn't.

It is very important to disable the interrupt while we make the 6510 change the vector. Remember, in the time which it takes you to read lines 160 to 190 in our program listing, the 6510 will have called the interrupt at least sixty times! So it could easily change part of the vector at \$0314 and then jump to the interrupt, using the same vector which it has just partially changed. This would result of course in it jumping to somewhere quite nonsensical! And this, in all likelihood, will mean a complete crash!

So we have to prevent the 6510 from following the interrupt while it is changing the vector.

In lines 210 to 230 I zero the two variables ("CURSFLAG" and "COUNT"), which will be used in the interrupt routine itself. More about this in a minute.

Flashing the Cursor

What does "flashing the cursor" mean? (and I am not thinking of the possible naughty connotations...)

In slow motion it means that there are two states in which a certain

position on the screen can be: in the normal C64 mode you either have the character at that position printed normally or in reverse. The flashing effect comes from the machine alternating between these two states.

What happens is very simple - some of the time the interrupt is called, it prints the character in normal, while the rest of the time it prints it in reverse.

If it alternated between these two every 60th of a second, it would happen so quickly that you wouldn't be able to see the cursor. All you would get at that position is a bad case of flicker.

Therefore we have to introduce a timing device to make it alternate about once a second. This is what the variable "COUNT" is all about, which I introduced in lines 210-230. (Of course, by changing the value in "COUNT" you could easily change the timespan to suit your taste!)

It starts off with "COUNT" = 0. And every time the interrupt is called, this is bumped up by one (line 580). Then it is loaded into the accumulator and compared with 20 (lines 580-610). If it doesn't equal 20, the program exits straight away to line 980 (JMP \$EA7B makes it jump to the rest of the normal interrupt routine in the Kernal, which makes it read the keyboard as usual).

If it reaches 20, first, "COUNT" is reset to zero (lines 650-660), ready for the next go. Then it tests a variable which I have called "CURSFLAG". This contains either 0 or 1.

If "CURSFLAG" contains zero, the character "under the cursor" is reversed, by adding 128 to it (lines 740-810).

If "CURSFLAG" contains one, the character is put back to normal by subtracting 128 (lines 860-920). (I hope that you are aware, that you can do this with all screen codes, simply by adding or subtracting 128 to it...)

This is all there is to our cursor routine, except that every time "CURSFLAG" is zero, we load it with one and every time it is one, we clear or reset it. Don't think me too pedantic mentioning this little matter, because if you overlook it I can assure you the computer won't! And this will result in the cursor being off most of the time, which means you won't have a cursor!

Turning the Cursor Off

As I've said already, lines 310-390 turn our cursor off, by changing the vector at \$0314 back to normal.

I mention this specifically, because if you use your own interrupt routine you should always turn it off, when you don't need it any more!

The first reason for this is that your interrupt routine might slow other operations down, such as loading or saving to disk or tape, especially if your interrupt routine is longer than the one in ROM.

Secondly, it is easy to forget that your routine will indeed be executed every 60th of a second! Therefore, some of the variables which you use in the interrupt routine might be used by the operating system or by the program you are running in the meantime.

For example, if you use my "Speedy Assembler" routine (notice the subtle plug!), you should always turn off any interrupt routines you are experimenting with, before reassembling them. And above all, take care to reset all vectors as they were before. "Speedy Assembler", like many other programs of this kind, changes some of the vectors for its own purposes. If you want to be safe, exit from the assembler, run your program and then re-enter "Speedy Assembler" by typing "SYS 22623".

Introducing a Textfile

Having created our very own cursor (and I hope you will feel free to experiment with different versions) we now want to expand our typewriter routine in order to see our cursor working in all its aspects.

Figure 1

SEI=SEt Interrupt flag
CLI=CLear Interrupt flag
PHA=Push contents of the Accumulator
PHP=Push contents of the Processor status register
PLA=Pull contents of the Accumulator
PLP=Pull contents of the Processor status register

The main program in Listing 1 is similar to my last one, apart from the fact that I've added quite a few facilities to it, which makes our program more like a wordprocessor.

First of all, I have introduced a textfile which is useful for saving the text we have written and also sending it

to the printer later on. A textfile is an area in memory (in my case starting from 10000 but you can change this to any location which suits you) which stores the printable characters we have typed. In lines 140-170, "TEXTFILE" is initiated, and in line 780-790 the ASCII-character which results from the keypress is put into "TEXTFILE".

The accepted way to store characters with wordprocessors is in ASCII and not in the Commodore screen codes. Printers, including the Commodore printers, know nothing about screen codes, and later on you might even want to send a textfile down the line to another computer. ASCII is the standard and Commodore screen codes aren't!

Having introduced a textfile we have of course to take other routines into account! In other words, we are now dealing with two "current positions": one on the screen and one in the textfile! Both have to be updated in concord.

CRSR Left and Right

Since we have now got a cursor, we naturally need to move it! To this purpose I have built a cursor left and right facility into the program. And here I have been more clever than usual! Instead of writing two separate routines I have built both facilities neatly into the existing routines.

The idea is simple, if you move the cursor to the right, it is the same as if you enter letters - only without the letters, if you get my drift...

On the other hand, if you move the cursor to the left, it is like deleting characters - only without actually deleting anything.

Therefore, cursor right fits neatly into the normal writing routine, while cursor left goes into the deletion routine.

With the cursor routine, the only important thing is, that I don't want the cursor right ASCII-character, which is 29, to be printed on the screen, because this would give me "J", as it happens. So whenever CRSR right is pressed, the program jumps straight to line (980) where the print position (both on screen and in the textfile) is updated.

For cursor left I had to do some modifications to the deletion routine:

First of all, in lines 1340-1390 I used the X-register instead of the accumulator to test for the beginning of the screen. This is because I do not want to corrupt the contents of the

accumulator, which at this point contains the result of the last keypress.

Then I save the contents in the accumulator by pushing it onto the machine stack (line 1430). (More about this in a minute!). This allows me to decrement the print position one to the left, as usual. It suits me that it recovers the character to the right too, because in this way I get rid of the cursor!

Afterwards I pull the contents of the accumulator from the machine stack (line 1760) and give it another test. If it contains 20, then it is the deletion routine, if it contains 157, then it is cursor left, which means that no further action needs to be taken. It jumps straight to the exit in line 1890.

Pushing and Pulling

In the first article of this series I briefly mentioned the existence of the so-called machine stack.

The trouble with the machine stack is that, like so many others in computing, it is thought of as mysterious, and difficult. In reality it is nothing more than another area in the computer-RAM (starting at \$0100 or decimal 256 - the next page after zero-page) which is used for storing data.

These data-bytes are simply piled on top of the other. This has the effect that the machine stack grows to the roof. (Where else should it grow, if you pile things on it?). With heaps like this it would of course, not be a very good idea to retrieve items by pulling them from the bottom or the middle. If you do this with a pile of books, you might easily have a nasty accident. Nothing like this happens with the machine stack, but the data-byte you pull is meaningless to the computer.

So, you "push" things onto the top of the stack and you "pull" them back from the top again. The secret of the whole thing lies in the sequence in which you do all your pushing and pulling:

If you push A, B, and then C, and you want then to start pulling things again, the first thing you get is C, B, and finally A. The whole secret of using the machine stack lies in pulling first what you pushed last, and pulling last what you pushed first.

The 6510 actually has a special register - the "stack pointer", which you can program and therefore change the top of the stack, as it is perceived by the computer. But this is something for connoisseurs and kamikaze pilots. You also always have to bear in mind

the machine stack, and whether its proper functioning is vital to the proper functioning of the computer as a whole!

Because every time the 6510 jumps to a subroutine it pushes the return address onto the stack. If, at the end of that subroutine, it can't retrieve the proper address back from the stack, it is well and truly lumbered!

So, if you push something onto the stack, always be sure to pull it before you leave the subroutine you are in!

The advantage of using the stack to store things, is that it is convenient and cheap in memory. "PHA" and "PLA" together use only two bytes, and that's half the length you need if you store in a zero-page variable. The disadvantage arises if you are not quite certain whether you will have pulled before you exit.

For example, at the beginning of our deletion routine I could have pushed unwittingly the contents of the accumulator onto the stack before I tested the screen position in lines 1340-1390. But this would result in the stack getting out of order every time the user presses the deletion key at the beginning of the screen. Because it would then jump straight to the exit in line 1890 and this would mean that there would be no equivalent pull from the stack! This would have created the type of classic machine code bug that usually takes days to find!

Unlike other microprocessors, the 6510 allows you to push only two registers onto the stack: the accumulator and the flagregister. "PHA" stands for "Push the Accumulator onto the stack", while "PLA" stands for "Pull the Accumulator from the stack". To push and pull the flag register use "PHP" and "PLP" respectively.

And Finally

Everything else in Listing 1 is very much the same as it was last time. I would like to give a special mention to lines 430 and 1980 which turn our cursor on and off and thus activate and deactivate our interrupt routine in listing 2.

I'll leave you with a little something to try for yourself. What about adding a CRSR up and down routine to our program? Here comes the only hint I am willing to give you - you have to add 40 to the screen (and textfile) position for CRSR down and subtract 40 for CRSR up.

See listings on page 77.

80 Character Print Out

Improve the printing powers of your C64 to produce 80 characters per line with this handy program.

By Jens Meyer

This program enables the Commodore 64 to print 80 characters per line instead of the usual 40. It does this by using the graphics screen, and not the text screen. All inputs are diverted to the graphics screen, where the letters are printed to half their normal width. Despite the fact that they are much thinner than normal letters, they are still clear and can be read easily.

The program is written entirely in machine code, but can be loaded normally and started using "RUN".

After loading you will be asked if you want the Eprom version - type 'N' for no and 'Y' for yes. If you select yes, a new version of the program starting at \$2000 will be saved to disk, enabling the user to program an Eprom with it later on, if you have the necessary equipment. The Eprom has some advantages to the normal version. It is much more compatible with other programs, as it is "Hidden Away" under the ROM and not stored in the Basic memory.

However, most users will select "NO". This will start the program immediately and means that you can simply save it to disk or tape with no need to program an Eprom, as this

version creates the 80 column display.

The Eprom option merely exists for a very small minority of people.

When the program is started, the following restrictions and changes occur:

- As the program uses the Hi-Red mode, only one colour can be used at any one time.
- The screen memory map is twice as big as usual because there are twice as many characters, and goes from \$CFCF.
- It is possible to mix upper and lower case letters and graphics because the

graphics mode is being used, and letters which are already on the screen will not be changed, even if, for example (SHIFT)+(COMMODORE) are pressed. The new character set is created by using bits 0,2,4 and 6 of the letters of the old character set.

Also, there is a routine in the memory which scrolls up everything on the graphics screen by 8 pixels (one line) to imitate the scrolling upwards in the text mode.

The characters are stored in both the screen memory map and the graphics bit map.

The following table shows the use of the memory by 'ROM 80':

\$C400-\$C7FF	NEW CHARACTER SET
\$C800-\$CFCF	SCREEN MEMORY MAP
\$CFD0-\$CFFB	ROUTINE FOR SCROLLING GRAPHICS
SCFFF	PRESENT FORE - AND BACK-GROUND COLOUR
\$DC00-\$DFE7	(\$5C00-\$5FE7 IN RAM VERSION) COLOUR
\$E000-\$FF3F	(\$6000-\$7F3F IN RAM VERSION) GRAPHICS BIT MAP

But enough of all the technical details. If you want your Commodore 64 to have an 80 column display, just

use 'ROM 80'.

See listings on page 77.

The most powerful productivity software ever developed for your computer

SuperScript gives you everything you need for professional word processing in one easy to use package. Its menu command structure puts you immediately at ease, with no complicated commands to memorise, yet

SuperScript combines business-style editing, spell checking, calculator, row and column arithmetic and full mail merge facilities. The phrase glossary feature enables you to store whole passages of text, or command sequences and recall them with a simple key.

Commodore 64 disk **£24.95**
Commodore 128 disk **£29.95**

Superbase is the most powerful database system ever developed for 8 bit computers. Why? Because not only can you access its commands from menus but you can string them together with BASIC commands to form your own complete programs. Superbase can import data from and export to other programs via sequential files. In addition the C-128 version will load together with the SuperScript word processor to create a completely integrated office system.

Commodore 64 disk **£24.95**
Commodore 128 disk **£29.95**

SuperDiskDoc is the ultimate Commodore disk utility program, and the best protection there is for your valuable data. Zoom in on the bytes on your disk, interpret them in hex, ascii or plain English, make any changes you want, then replace them. SuperDiskDoc brings you extra security. You know that in the event of an accident to your data you have the best tool available to repair the damage.

Commodore disk **£9.95**

The in-depth guide to using the Superbase system, from first steps through to advanced programming techniques. The wealth of hints, tips and practical examples makes Superbase: The Book required reading for anyone working or contemplating working with Superbase. 194 pages **£11.95**

Controlling the 80 column video display

*If you own a C128 and you're eager to know more
about the capabilities and limitations of VDC, then read
on.*

By Leigh Brown

It is useful to have a rudimentary knowledge of Machine Code as some of the operations that the 8563 can perform are not possible in BASIC. Also, it is important to remember that a monitor is needed for 80 columns and some people may not be able to afford the expensive Commodore monitor. I would advise those people to use a standard monochrome monitor.

The VDC has been designed to cater for most of the programmers' needs. For example, it has its own cursor and its own 16K bytes of RAM. However, it has a few drawbacks, but you should get used to these after using the VDC for a while. The first of these is the addressing of the VDC. All of the 37 registers are accessed via two locations in the Input/Output area of the computer. These locations are \$D600 and \$D601 and act as a simple Input/Output port. For example, to store 15 in register 11 you store 11 in location \$D600 and then store 15 at \$D601. And to read from register 11 you store 11 in location \$D600 and then read the value from \$D601.

Figure 1

7	6	5	4	3	2	1	0
ALT	RVS	UND	FLA	RED	GRE	BLU	INT

Figure 2

\$D600: Read: --- << 6 bits register select >>
Write: status Lpen Vblank ---
\$D601: Both: << 8 bits for reading and writing data >>

Figure 3

Reading to and writing from registers: Using these routines, X is the register and Accumulator holds data.

.write	STX \$D600	/Write register	
.test1	BIT \$D600	/is VDC busy?	ROM COPY
	BPL test1	/yes, then wait	AT \$CDCC
	STA \$D601		
	RTS		
.read	STX \$D600	/Write register	
.test 2	BIT \$D600	/is VDC busy?	ROM COPY
	BPL test2	/yes, then wait	AT \$CDDA
	LDA \$D601		

Location \$D600 also has some other uses when read. Bit 7 returns the status of the VDC, in other words whether it is busy or not, as some operations take some time. Bit 6 is used for the light pen, which doesn't concern us. Bit 5 is the vertical flyback bit, so you can synchronize events to the monitor or alter the screen without flickering occurring.

The 16K RAM of VDC

As mentioned before the VDC 'owns' its very own RAM, but it can only be indirectly accessed via the registers. This means you can redefine the character set which is held in the VDC RAM, or store directly to screen. However, this cannot be done in BASIC, so we must resort to machine code. The registers we need are 18, 19, 30, and 31. They must be written to in this order:

Store the high byte of the address in register 18.

Store the low byte of the address in register 19.

Store the byte to poked at address in register 31.

Store the number of characters in register 30.

However, the VDC stores the number of characters plus one. So in register 30 we have to store the number of characters minus one. Also, you may have noticed that you can't print one character. Oh well you can, all you need to do is *not* write the number of characters to register 30. The whole process is carried out with bit seven of register 24 cleared.

You can also copy RAM from place to place, using the same method but thankfully it works properly! The number of characters to be copied corresponds to the word count register (31). The method is basically the same as storing characters but you must set the copy bit in bit 7, register 24. The start address to be copied is stored in registers 18 and 19, and the destination address is stored in registers 32 and 33. The copying process begins when the word count register is written to.

The VDC Screen

The screen is extremely versatile - you can change the physical size of the

Figure 4

Reading and writing RAM. Writing one character:

```
.write1      PHA          /temporary store
              TXA          /store
              LDX #19      /low
              JSR write    /byte.
              DEX          /store
              TYA          /high
              JSR write    /byte
              LDX #31      /recall
              PLA          /and store
              JSR write    /data
              LDA #18      /store dummy
              JMP write    /and leave (if stand alone
                          /omit 'JMP write')
.test1       STX $D600
              BIT $D600
              BPL test1
              STA $D601
              RTS
```

Writing more than one character: Accumulator holds the character to be stored, location 250 holds number of characters minus 1, X and Y hold the low and high address of the location in VDC memory.

```
.writem      PHA
              TXA
              LDX #19      /write low byte.
              JSR write
              DEX
              TYA          /write high byte.
              JSR write
              LDX #31      /write character
              PLA          /to be stored.
              JSR write

COMMODORE PLUS-4/C16 NEW!-BANGS AND CRASHES!! RHYTHM BOX

This Rhythm/Drum box will set your feet tapping! At a very modest cost you can sequence a wide variety of digitally recorded percussion sounds. Very easy to use. No knowledge of music is required. In seconds you can set up pulsating rhythms to accompany your music. A variety of drums, tom toms, cymbals and a bass guitar combine to produce sounds you never thought possible on the C16/Plus 4. Easy entry of rhythms and a powerful pattern editor. An excellent package — good value at £7.95 cassette £9.95 disc.

NEW!-WISP Amazing new product!

WISP offers you a refreshing new way to operate your PLUS 4. WISP stands for Windows Icons Silicon-disc Package. It is packed with many powerful features. Everything in your new operating environment is run through windows — just like on very expensive computers. Built in window facilities include a) calculator b) silicon disc c) note pad d) directories e) fast load and save f) error trapping g) programming windows.

Windows may be closed and neatly stored as icons. A smooth sprite is used to select the windows you wish to use from the pull down menus.

With the silicon disc you can instantly save, load and directory — all in under half a second (much faster than even a disc drive!).

The fast load and save to cassette is about ten times normal speed! We have never before sold such a feature packed program to give you power to control your computer to its limits. The ultimate programming environment. Incredible value. Plus 4 only. Cassette — £9.95 Disc £14.95.

NEW!-BLACK CAT 2

We have black cat 2 in stock and waiting to be despatched to you! Have you ever wanted to use your PLUS-4 Wordprocessor, Spreadsheet, Business graphics etc. with a cassette unit? This program allows you to save your files to cassette rather than disc (as forced to by Commodore).

Version 2 incorporates a FAST load and save system so you can save your files to cassette at disc speed! Quick, convenient, easy to use. Only £5.95.

THE MIRROR-TAPE BACK UP

Super tape to tape back up copier catering for many PLUS-4/C16 games. Backs up both standard and FAST loading software. Very popular utility — Excellent Value — £7.95

THE WAND-TAPE TO DISC

Make full use of your disc drive by effortlessly converting many of your games/software to disc. We have had many letters telling us how much people appreciate this utility. Excellent value — supplied on disc — £12.95

PHOTON LOAD- FAST LOAD AND SAVE

Have you ever wasted time waiting for your programs to load or save? PHOTON LOAD, the new cassette operating system loads in seconds and allows you to load and save your programs at about TEN times the speed of a normal load or save. Why spend money on a disc drive when you can load and save this fast. Great value £7.95

SUPER SPRITE

This extremely clever utility allows you to use 8 sprites simultaneously over a low-resolution screen. With this program you can now imitate the sprites found on the Commodore 64! A complete package with FREE demo programs and a FREE sprite designer. What more do you need to bring real power to your games on your C16/PLUS 4. A must for games programmers. Excellent value — Cassette £7.95 Disc £9.95

ELECTRIK PENCIL!!!

A truly excellent high resolution art program. Magnificent masterpieces can be quickly drawn using the powerful facilities provided by this package. Impressive results in no time at all. Cassette only £7.95 Disc only £9.95

CASSETTE INTERFACES

If you have a Commodore 64 cassette unit which you would like to use with your C16/PLUS 4 then you need one of these. Just plug in and go! — Only £5.95

MERLIN ASSEMBLER

100 o/o machine code assembler for the Plus-4/C16. Very fast assembly of source code. Easy entry/editing of code via the full screen editor. Full load/save and printer facilities. Variable names, labels, hex/decimal, text and data statements, remarks, post indexing of variables etc. Many other facilities too numerous to mention. Highly recommended — A truly superb assembler. Comes with instruction booklet and working examples of machine code routines. READ THE EXCELLENT REVIEW IN YOUR COMMODORE — MARCH 1987. Cassette £8.95 Disc £13.95

JOYSTICK ADAPTORS

Converts any joystick to Plus 4/C16 format. Simply plug in and go! Only £3.50

Tape Head Alignment C16/+4

The perfect cure for the majority of loading programs. Specification as for the Commodore 64 (see below). Only £6.95

COMMODORE 64 EVER HAD A LOADING PROBLEM?

Then send off for WIZARD'S "TAPE HEAD ALIGNMENT KIT 64" — The most common cause of loading failure is bad alignment of your tape heads. This kit allows you to set up the tape heads of your cassette unit for the BEST possible loading conditions. In many cases this will make a remarkable difference in loading reliability. The complete feature packed kit — £6.95!!!

RAPID despatch of orders.

Send an S.A.E. for our current catalogue with full descriptions. U.K. P&P FREE and by FIRST CLASS post. Europeans please ADD 50p. Outside Europe ADD £1.50 for AIR MAIL. Overseas orders welcome. All payments must be made in pounds sterling. Cheques/P.O.s to:

POOLSWINNER II

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available — 22000 matches over 10 years.
- **PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- **SUCCESSFUL SELEC** guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture — choose as many selections as you need for your bet. The precise prediction formula can be set by the user — you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **LEAGUE AND NON-LEAGUE** All English and Scottish League teams are supported, and also the non-league sides often used on pools coupons.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

PRICE £15.00 (all inclusive)

**NOW
AVAILABLE**

FIXGEN 87/8

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish League fixtures for 1987/8. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner. Yearly updates available.

POOLSWINNER with FIXGEN £16.50 (for both)

COURSEWINNER V3

THE PUNTERS COMPUTER PROGRAM

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc. etc. It outputs most likely winners, good long odds bets, forecasts, tricast etc. The database includes vital course statistics for all British courses. You can update the database — never goes out of date. FULL PRINTER SUPPORT.

PRICE £15.00 (all inclusive) includes Flat AND National Hunt versions.

ALL PROGRAMS AVAILABLE FOR: AMSTRAD CPCs, AMSTRAD PCWs, PC1512, All BBCs, All SPECTRUMS, COMMODORE 64/128.

Supplied on tape (automatic conversion to disc) — except PCW and PC1512 (on disc — add £3.00).

Questionnaire 1

*Whether you wish to test your neighbours IQ or find out
how clever friends at your computer club are, this
program will help you.*

By David Warner

Questionnaire I enables you to compile your own multiple-choice quizzes and save them out to disk for use at a later date. You can use the program just for fun or even use it for educational purposes.

The program is presented here as two Basic programs. Type them both in separately and save them out to disk. When you want to use the program simply LOAD and RUN the program "Q-BOOT". The second part of the program will then load and execute automatically.

What's the question?

Obviously before you use the program for the first time you will need to set up some questions.

When you select the 'create questions' options from the main menu you will be asked for the number of questions that you want to set. You will then be asked for each question in turn together with a number of possible answers. Once all of the information for each question is answered, you will be asked to indicate which is the correct answer.

If you find that your question is over one line in length, you must start the next line *three* spaces from the start of the second line. This is to ensure that the text will be correctly formatted when displayed on the screen.

See listings on page 77.

Save your work

When saving your questions out to disk, you may find it useful to include the number of questions within the filename. The reason for this is that you will need to tell the computer how many questions are to be loaded when you want to reuse any quizzes that you have set. As an example "HISTORY 20" would be a set of 20 history questions.

Time out

Provision is made within the program

to display a clock on the screen. To use this feature you should enter the time in the format P.12.05.00 the P being PM (A for AM) and the following numbers being the hours, minutes and seconds respectively.

Software for Sale

Should you purchase this month's software for sale disk you will find that there are three sets of example questions for this program on it.

VC

QUESTION NO. 1

WHAT IS THE SMALLEST BIRD IN BRITAIN?

- A. BLUE TIT
- B. COAL TIT
- C. GOLDCREST
- D. WREN

May I Interrupt?

How to make your C64 reveal its split personality.

By Norman Doyle

Interrupts can make your computer do things that it was never designed to do. For example, it is impossible to have capital letters, Commodore graphics and lower case letters on the screen at the same time. The usual form is capitals and graphics with no lower case; or capitals, lower case and limited graphics.

To have everything on the screen at the same time, we have to change the screen style in mid-scan. This is known as a raster interrupt because it takes place during the time that the screen, or raster, is being scanned.

First of all, we have to tell the computer where we want the interrupt to occur on the screen. The scan time is divided into 256 parts but although a full scan takes 256 raster count units, the screen is only visible when the value lies between 51 and 251. By storing a value in \$D012, you can cause an interrupt to occur at any moment during the scan period. If this occurs while the visible portion of the screen is being scanned, it is called a split-screen interrupt.

First of all, we have to set up the interrupt conditions. Listing 1 may seem familiar because it's based on the routine that I showed you last month. The new part of the initialise routine sets the raster interrupt.

The accumulator is loaded with the value which represents the point at which I want to interrupt the screen. It is stored in location SD012 - the raster compare byte. Next, the computer has to be told to expect a raster interrupt. This is done by setting the first bit in location SD01A.

You'll notice that there are two interrupt routines and that one modifies the interrupt vector (double byte \$0314) to point to the other routine. So you establish two interrupt environments which are executed on alternate interrupt periods.

The basic routine causes the colours of the screen and border to change in mid-scan and the effect on the screen makes the top of the screen yellow and the bottom area black.

Apart from changing the interrupt vector, each routine has to reset the

Table 1

Command Type	Examples	No of cycles
Implied	CLC CLD CLI	2

	BMI BNE BPL	
	BVC BVS	

*Add an extra clock cycle when the program takes the branch and add another if the branch then crosses a page boundary.

value of the interrupt compare byte to that of the other interrupt value. Then the computer is told to execute the next screen interrupt by setting the lowest bit of location \$D019.

In case you're wondering why two interrupt routines are necessary, consider what would happen with only one. When the first interrupt occurs the screen colour changes and will not automatically change back to the original colour. The net effect, therefore, would be to maintain yellow as the screen colour no matter what the run time program was trying to dictate. The second interrupt changes the colour so that the colour banding occurs.

The RASTER1 and RASTER2 values are arbitrary ones which I have selected for this demo. The first value must be less than 51 otherwise a black band would appear at the top of the screen - a good way to create a coloured band across the middle of the

screen. RASTER2 determines where the colour change occurs, therefore any value between \$43 and \$FB could

The second routine starts off with several NOP commands. Although these apparently do nothing, the effect is to delay the execution of the colour change so that it occurs at the end of a line. Without this delay, the interrupt would occur in the middle of the line causing glitches which may show up as flickering or create a 'step' on the smooth line of the screen split.

Such timing problems can be tackled in one of two ways. The NOP system lengthens the interrupt code and reduces the amount of time in which other things could be done. A better way of overcoming this problem is to place the colour change code further down the routine, after calculating the number of clock cycles which are needed for the delay. A list of these cycle times can be found in Table 1 and Table 2.

Table 2

Accumulator	Immediate	Absolute	Absolute,X	Absolute,Y	Absolute Indirect	Zero Page	Zero Page,X	Zero Page,Y	(Indirect,X)	(Indirect),Y

STX	.	4	.	.	.	3	.	4	.	.
STY	.	4	.	.	.	3	4	.	.	.

*Add one clock cycle if indexing crosses a page boundary.

The timing is not too crucial because setting up a new scan line takes approximately 28 cycles. From our example, we can calculate that

nine NOP actions represent 18 cycles. This means we have to add between 18 and 46 cycles. If the following liners are moved to replace the NOPs, the

program should run as if nothing has changed:

```
LDA # ROUTINE1&255 ... 2 cycles
STA LO.VECTOR ..... 4 cycles
LDA # ROUTINE1/256 ... 2 cycles
STA HI.VECTOR ..... 4 cycles
LDA # RASTER1 ..... 2 cycles
STA $D012 ..... 4 cycles
Total=18 cycles
```

To get both sets of characters on the screen at the same time means indulging in a little emulation. This may seem like cheating but a little study of the ROM handling will reveal the reasons why the technical white lie is necessary.

The VIC chip can only access one 16K block of memory at a time. This not only applies to the screen but also to the character set. On power up the screen is situated at \$0400 but the character ROM lies at \$D000, well over 16K away. To allow the VIC to 'see' the ROM, the operating system places an 'image' of the ROM at \$1000. This image is invisible to the user but essentially very real and necessary to the operating system of the computer.

All we do with the supplementary Listing 2 is to physically transfer the ROM characters to the lower section of memory where its image normally lies.

Having done this, the two routines have to be altered to switch between the 'capitals' characters and the lower case ones. This is done by altering location \$D018 which acts as a character pointer. How this works does not concern us yet, it will be the subject of a later section of this series.

Next, enter Listing 3 and then run it. You will see two capitals blocks but press any key and the bottom set changes to lower cases. Now we have both character sets displayed at the same time.

Move the cursor to the bottom line of the screen and continue pressing down the cursor until the first line of the bottom block lies on the screen split. Now you can see that my 'arbitrary' split value was not so arbitrary after all!

What you should see is that the top half of the letters are in capitals while the bottom half remain in lower case.

That's as far as I am going during this session but next time I'll be concerning myself with smooth scrolling and the tricks that all this can open up to the programmer. YC

TOTAL BACKUP POWER! Now ACTION REPLAY!

NOW EVEN MORE POWERFUL, MORE FRIENDLY AND WITH

ONLY
£29.99
POST FREE

Action Replay works by taking a 'SNAPSHOT' of the program in memory so it doesn't matter how the program was loaded – from tape or disk – at normal or turbo speed.

● **WARP 25. THE WORLD'S FASTEST SERIAL DISK TURBO – NOW EVEN FASTER! LOADS 200 BLOCKS IN 6 SECONDS! 240 BLOCKS IN 7 SECONDS!**

– that's even faster than some parallel systems. Built into the cartridge – no extra hardware or software required. Includes supercast, warpsave, scratch, filecopy/convert. Integrated with normal disk turbo for supercompatibility – auto detects warp or normal format so no special load commands are required. Turbo and Warp 25 speed are entirely independent of the cartridge with SUPERBOOT.

● **SIMPLE TO USE:** Just press the button and make a complete backup – tape to disk, tape to tape, disc to tape, disk to disk. THE PROCESS IS AUTOMATIC – JUST GIVE THE BACKUP A NAME.

● **TURBO RELOAD.** All backups will reload at turbo speed, COMPLETELY INDEPENDENTLY OF THE CARTRIDGE.

● **SPRITE KILLER.** Make yourself invincible. Disable sprite collisions – works with many programs.

● **PRINTER DUMP.** Freeze any game and print out the screen. Eg. loading picture, high score screen etc. Works with most printers. MPS 801, 803, Star, Epson etc. Double size, 16 shades, reverse print option. Very versatile – no user knowledge required.

● **PICTURE SAVE.** Save any Hires multicolour screen to disk at the push of a button. Compatible with Blazing Paddles, Koala, Artist 64, Image System etc.

● **SPRITE MONITOR.** Unique Sprite monitors allows you to freeze the action and view all the sprites, watch the sprite animation, save or delete any sprite. Load sprites from one game into another to make customised programs.

● **POKES/CHEAT MODE.** Press the button and enter those pokes for extra lives etc., then restart the program or make a backup. Ideal for custom games.

● **MULTISTAGE TRANSFER.** Even transfers multistage programs from tape to disk. The extra parts fast load – a unique feature. Enhancement disk available for non-standard multi-loaders (see below).

● **SUPER COMPACTOR.** Ultra efficient program compaction techniques. Each program saved as a single file. 3 programs per disk side – 6 programs per disk, if you use both sides.

● **TEXT MODIFY.** Change title screens, high score screens etc. Put your own name into a game then restart it or make a backup to tape or disk. Very simple to use.

● **MONITOR.** Full feature 'Floating' type MACHINE CODE MONITOR. All standard features plus many more: assemble, disassemble, hex dump, interpret, transfer, compare, fill, hunt, number conversion, bank switching, relocate, load/save etc. Uses no memory. Full printer support.

● **DISK MONITOR.** A special monitor for use on the RAM inside your disk drive. All the usual commands – a useful hacking tool.

● **WHOLE DISK COPY.** Copy a full unprotected disk in under two minutes with only one drive.

● **FAST FILE COPY.** Works with standard and Warp 25 files of up to 249 blocks. Converts formats to and from Warp 25.

● **FAST FORMAT.** Under 20 seconds.

● **TOOLKIT COMMANDS.** A whole range of useful new commands including: AUTO LINE NUMBERING, DELETE, MERGE, APPEND, OLD, LINESAVE, etc., PRINTERLISTER – list any program (including directory) directly from disk to printer or screen without corrupting memory.

● **REDEFINED FUNCTION KEYS.** Single stroke commands for operation of many common commands including: LOAD, SAVE, DIR. Load from directory – no need to type in filename.

● **TAPE TURBO.** Designed to make turbo load/save for your own programs. No screen blanking during loading.

REMEMBER all features are built in and available at the touch of a key. All features work with both **TAPE** and **DISK**. (Except multipart transfer & disk file utility).

ENHANCEMENT DISK

Contains routines for transferring many of the non-standard multi-load games from tape to disk. Over 40 titles. Latest additions are **LAST NINJA**, **ROAD RUNNER** (infinite lives option), **BLOOD 'N' GUTS** (play any event), **DECEPTOR**, **LEADERBOARD EXEC** and **WORLD CLASS**, **KILLED UNTIL DEAD**, **MASK**, **INDIANA JONES**, **IMPLOSION**, **TAIPAN**, plus all the classics including **SUMMER GAMES**, **WORLD GAMES**, **DRAGONS LAIR 1 and 2**, **GAUNTLET**, **SUPERCYCLE** etc. Works in conjunction with **ACTION REPLAY**.

Disk includes **GRAPHIC SLIDESHOW** for displaying pictures saved with **ACTION REPLAY**. Plus Warp 25, Superboot – non Action Replay owners can speed up their 'expert' or 'freeze machine' programs to see what they have been missing.

REPLAY TAKES A QUANTUM LEAP ACTION REPLAY MK IV HAS ARRIVED!

FOR
CBM64/128

BACKUP MORE PROGRAMS THAN ANY RIVAL UTILITY.

BUT THATS NOT ALL ... NOW AVAILABLE FOR THE SERIOUS PROGRAM HACKER
ACTION REPLAY IV 'PROFESSIONAL'™

● All the features of the normal Action Replay IV but with an amazing on board LSI LOGIC PROCESSING CHIP. Plus 32K operating system ROM and 8K RAM CHIP. The first RAM/ROM based cartridge of its type!

ALL THE MK IV FEATURES PLUS ...

● FULLY INTEGRATED OPERATION.

The MK IV 'Professional' has all the features of the MK IV plus an onboard custom LSI LOGIC PROCESSING CHIP that integrates the whole range of utilities and makes them available at the press of a button at any time.

● EXTENDED MONITOR.

The 'Professional' has an extra powerful machine code monitor. Because it has both ROM and RAM at its disposal the Professional can freeze any program and then examine the WHOLE OF COMPUTER MEMORY in its frozen state including screen RAM, ZERO PAGE and STACK.

Full feature disassembly, compare, fill, transfer, hunt, relocate, jump etc. etc. In fact all the features of the best fully blown monitor available. Return to the frozen program at the press of a key at the point you left it! An absolute must for the program hacker - or even the programmer who needs to de-bug his program.

● INTELLIGENT HARDWARE.

The Professional hardware is unmatched anywhere in the world today. The special logic processing chip can cope with protection methods as they appear by reacting to its environment.

MK IV
PROFESSIONAL
ONLY £34.99
POST FREE

WARP 25
Reloads an
average BACK-UP
in 6 Seconds!!

UPGRADE INFORMATION

MK III TO MK IV. Just send £9.99 and we will send you the new MK IV Chip to plug into your cartridge. Fitting is very easy.

MK III TO MK IV 'PROFESSIONAL'. Send your old cartridge plus £19.99 and we will send you a new Professional MK IV.

MK 2 Action Replay owners can get £10 as part exchange against either the MK IV or Professional. Send old cartridge plus balance.

PERFORMANCE PROMISE

Action Replay will backup any program that any other cartridge can backup - and more! It also has an unmatched range of onboard features. Before you buy check our competitors ads to see what they offer and see how many of the Action Replay MK IV features are either not there or have to be loaded from Supergate disks etc. When you buy Action Replay if you don't find our claims to be true then return it within 14 days for a full refund.

THE ACTION—SIMULATION

AIRBORNE RANGER

You are one of the elite ... parachuting alone behind enemy lines. The enemy controls the terrain, hidden in bunkers and machine gun nests ... you may be surrounded. The action is fierce as you control one soldier's battle against overwhelming odds. You'll need skill and strategy to out-manoeuvre your enemy, plus courage and some luck to make your escape. Airborne Ranger is an exciting fast-paced simulation with 12 desperate missions in 3 different regions of the world. The possibilities are endless!

AIRBORNE RANGER. A challenging combination of danger and suspense. Available for the Commodore 64/128K. Cassette £14.95 Disk £19.95.

Use
BTP

BobstTerm Pro

A close look at what could be the ultimate C64 communications program.

By David Janda

BobstTerm Pro (BTP) was produced in the United States by Bob Lentini, a leading authority on Commodore communications. The package is being distributed in the UK by Precision Software who are best known for their Superbase and Superscript packages.

To refer to BTP as comms software would be a bit of an insult. BTP is a complete telecommunications environment that incorporates almost every facility you could hope for. I say 'almost' because the package was written for the American market, and as such there are a few facilities that we would not use here in the UK - the Punter file transfer protocol being one example. Having said that, the few inconsistencies that I noticed do not affect the overall performance of the package.

User Friendly

BTP is a complex package, yet easy to

use. This is because the author has opted to make BTP completely menu driven. Not the best user interface when compared to something like Amigas Kickstart, but it's very fast and effective in use. All the menus are well laid out and it was immediately apparent that a lot of thought went into the design of the menus. Presenting a screen full of detailed information such as the XMODEM transfer characteristics in a clear, easy to read format is not an easy task, but BTP succeeds in this respect.

The menus are in a hierarchical form with the main menu at the 'top' with sub-menus leading from it. Most of the commands are of the single key type with the letter corresponding to the action, e.g. pressing the Commodore key with E will toggle the echo. There are 19 such commands which are called comkey commands, and pressing 'K' from the main menu will list them with their associated functions.

Features

There are three methods of entering terminal mode in BTP, by pressing 'T' from the main menu, from the auto menu after dialing a number, or from the auto menu in answer mode. Once in terminal mode you are presented with a blank screen with five status lines at the top; the first of which is used to display various comkey settings e.g.:

```
CR:BFXXXXX:E:LI:LO:C:F:ASC:Λ
:0:hh:mm:ss
```

BF will show how many characters free there is in the buffer (which starts off at 28,500 bytes), E indicates whether echo is enabled and so on. Options that are enabled have their corresponding letters displayed in reverse video, and all the comkey commands are accessed by pressing the Commodore key followed by a letter (Table 1).

The next line consists of 40 dashes or a double row of dashes depending on whether the modem is on or off hook, and the following two lines are used to display various messages when transferring files. If anything drastic happens, such as an aborted file transfer, a flashing message will be displayed on the next line.

Communications is carried out on the following twenty lines by forty characters with the option of entering text in a two line window. This is very handy for those who like to play online adventure games or use real time chat facilities because the entered text will not be broken up by any incoming text.

One comkey command of particular interest is the word wrap feature. When enabled, text entered by the user will be formatted. Likewise, text being sent from the host system will also be formatted and this feature proved to be most useful when using BBs that are set up for 80 column output.

The terminal mode and the rest of BTP has a couple of cosmetic features. If you don't like the character set that is used then you can select another from a choice of seven more, and you have the ability to define your own. The colours used for text, error messages, menus and so forth can all be individually changed as well.

Buffering

Most packages have some sort of buffering facility which can be used to grab text that is being sent from the host system. With BTP the concept of buffering is taken much further. You have the option to SAVE/LOAD to/from disk or RAM, alter the buffer with a complete array of editing commands that would put some word processing packages to shame, and much more. BTP does not limit the buffer to ASCII use only. Basic programs can be automatically converted to ASCII when loaded into memory and sequential listings can be converted into Basic programs. A host of other conversion formats are available, and BTP enables you to define your own!

A detailed spiral bound user guide that's over 100 pages in length describes very clearly every aspect of the package. A section is devoted to each feature and the six page contents ensures easy reference. The guide is

TABLE 1 — COMKEY COMMANDS

A — ASCII/BINARY
B — BUFFER
C — CAPS LOCK
D — DISPLAY TRANSFERS
E — ECHO
F — SCREEN FORMATTING
H — HOOK TOGGLE
I — LINEFEED IN
O — LINEFEED OUT
K — FUNCTION KEY LIST AND EDIT
L — LINE/CHAR ENTRY MODE (TERM MODE)
N — NULL STRIP (TERM MODE)
P — PRINTER ONLINE (TERM MODE)
R — RESET TIMER
S — SET TIME/START-STOP TIMER
T — TIME/TIMER TOGGLE
X — XFER FILES (TERM MODE)
@ — DISPLAY CTRL CHARS
* — CLEAR SCREEN (TERM MODE)

roughly divided into three sections; the first part covers getting started (for the impatient), next follows a detailed description of the package and the remainder of the guide covers parameter setting.

Compatibility

Before I detail BTP's features it's worth noting what the package cannot do, and the features that probably will not be of use to UK users.

First, BTP only works with modems that are connected to the user port, or modems that are interfaced with an RS232 converter which in turn is connected to the user port. This rules out the UK Commodore modem (commonly referred to as the Compunet modem). BTP contains a number of 'drivers' and is configured to work with the following modems:

Commodore 1650 Autodem;
Commodore 1660 Modem/300;
Commodore 1670 Modem/1200;
Westridge Modem;
Master Modem;
Mity-Mo Modem;

Hes I and II Modems;
Total Telecom Modem;
Hayes Smartmodem.

Most of the modems listed are not available here in the UK. This is not a problem though as BTP will work with any manual modem that's connected to an RS232 interface. However, unless you have one of the intelligent modems listed, or a Hayes compatible modem such as the Pace Series Four you will not be able to make use of the auto-dial features of the package. Demon/Voyager owners will not be able to auto-dial with BTP as these modems auto-dial by toggling the RTS line which is rather unconventional. Having said this it should be possible to make use of the auto-answer feature of these modems as long as pin eight on the RS232 converter is connected.

BTP allows pulse or tone dialing. The tone dialing feature is created by feeding the audio output of the C64 pack into the modem, but this feature is redundant because the UK System X dial tones are different from those used in the States — enough said.

Two other points worth noting are the Punter file transfer protocol and repeat dialing. BTP provides a number of file transfer protocols from straight ASCII to XMODEM (which is widely used throughout the UK). The Punter protocol is quite common in the US but not so here. However, I understand that a number of European Commodore Bulletin Boards will soon be using Punter, and if you should dial direct to the States it will no doubt be of use!

On a more serious note, BTP allows for repeat dialing. That is, when a number is auto-dialed and the host at the other end of the line does not answer BTP will continuously try the number over and over again. Your Commodore would like to point out that it is currently illegal for modems to repeat dial more than four times in succession, and as there is no facility to limit the number of re-dials (a bad point) this feature should be used with caution.

The Clever Stuff

The auto mode in BTP is used with one of the intelligent modems that is supported by BTP or a Hayes

compatible modem. From the auto mode menu you can enter a phone number and BTP will send the necessary command string to the modem to get it to dial the number. In answer mode the package will wait for an incoming call, answer the phone and display a welcome message which can be defined by the user. A neat feature is the ability to set up a password, thus offering a degree of security.

No doubt there are many similar sets of commands that you use when logging onto a BB or database. BTP allows the user to define a series of operations, called macros, that can be executed manually or automatically. Basically, a macro can consist of any BTP command, be it menu level, a comkey command or text that you would enter in terminal mode. The macro facility also has a degree of program control, so it's possible to detect whether certain characters have been sent by the host, and if so perform another set of commands.

The macro commands can be executed manually or automatically by setting a time when they should be executed. I had great fun defining a macro to dial Telecom Gold, enter my ID and password, check if there was any mail, spool it to disk if so and log off, or log off if there was none - all done when I was down the pub!

It's not as easy as it sounds though, and I wish BTP had more sophisticated macro commands. As it is, the present commands are rather limited.

As I have mentioned before, BTP is a sophisticated telecommunications package, yet it's easy to use. Even though the package is loaded with features, using it is simplicity itself, and if you use the phone book option which dials a set number each time it is executed things are even easier. For example, from the main menu, connecting to a BB or database can be as little as three key presses away; this ease of use is by far BTP's strongest point. The menu system and excellent

manual enabled me to use the package straight away with no problems whatsoever which is ideal in a comms environment. No comms package can offer a set of pre-defined settings that will see you through all possibilities, BTP offers some, but it also allows the use to tailor just about every aspect to their own requirements and save them as default settings.

In simple terms, BobsTerm Pro is the best piece of terminal software I have used on the Commodore 64. Its powerful features match and supersede those found on many professional PC based comms packages, and at £24.95 it represents excellent value for money. **VC**

TELETEXT

A world of
information at
your fingertips

The Microtext adaptor turns your C64 or C128 into a sophisticated Teletext Receiver. Giving you full colour display of any of the free pages from Ceefax or Oracle. As well as news and sports results, there is road, rail and air travel information, whats on TV and weather reports. You can get an update on share prices or bargain holidays. And not only does Teletext cater for special interests, like computing, motoring, or gardening, but you'll also find things to do and places to go in your area, prize competitions and even your daily horoscope, plus much much more. It's all free, easy to use and it's all at your fingertips.

A page like a recipe or a weather map may be saved to disc or cassette or even printed out and the manual has examples and shows how to access and use Teletext from your own programs, the ability to use live information like football results, exchange rates or weather conditions, provides possibilities limited only by your imagination.

The adaptor fits neatly on the user port of the Commodore. A lead goes to the 'VIDEO OUT' socket of your video recorder so using your Video as the Tuner for the system.
Just £69.95 inc P&P (Overseas add £2.00)

"I wouldn't hesitate to recommend this to anyone"
— Your Commodore Jun 87

MICROTEXT TUNER NOW AVAILABLE

Our own Tuner has been specially designed to provide the signal that the Adaptor needs, thus eliminating the need for a video recorder. Just plug in an aerial, it tunes itself in (!) and channels are selected from the keyboard. The whole system consists of a Microtext Adaptor, Tuner, Power supply, lead and manual and costs just £114.80 inc P&P (128D version add £8.50) Only from:-

Sprite Library

Continuing our Sprite Library series, this month we look at the ways of producing different types of vehicles.

By Mike Benn

This month's addition to the Sprite Library will be helpful in the area of scrolling backdrops. The vehicles listed in the table require multi-colour mode and each definition needs two sprites per vehicle. Each vehicle is made up of four blocks of sprite data – the first pair being a side view and the second pair depicting a birds eye view. All the traffic faces right so if you need any of the vehicles facing left they will need to be manipulated by a suitable sprite editor.

Table (Vehicles – Multi-colour)

Hex	Decimal	Description
A0-A3 /	160-163	Bicycle
A4-A7 /	164-167	Tandem
A8-AB /	168-171	Scooter
AC-AF /	172-175	Motorcycle
B0-B3 /	176-179	35 CWT Van
B4-B7 /	180-183	Light van
B8-BB /	184-187	Land Rover
BC-BF /	188-191	Light pickup
C0-C3 /	192-195	Jeep
C4-C7 /	196-199	Estate car
C8-CB /	200-203	Small hatch-back
CC-CF /	204-207	Saloon car
D0-D3 /	208-211	Sports car
D4-D7 /	212-215	Porsche
D8-DB /	216-219	Racing car
DC-DF /	220-223	Taxi cab

Getting it all in

Type in the basic loader as published and *save it-don't run it* or it will self-destruct. Before running the loader program you will need to reset the computer and type the following:

POKE43,0:POKE44,64:POKE16384,0:NEW and press return. This will trick the computer into believing that the Basic now starts at \$4000 instead of \$0801. Load in the Basic loader and run it; if error free, the program will automatically save itself as a block of data. If you reload that data in the future remember to add a 1 after the device number. The data is saved in the following location \$2800-\$37FF.

The sprites run from 160 to 223 in a compromise to avoid the area of \$2000 traditionally set aside for redefined character graphics and to avoid the need of typing in line after line of data.

If only one or two sprites are required then use this formula: $\langle \text{Sprite block No.} - 160 \rangle * 40 + 190 =$ the data line number at which that sprite blocks data starts. Remember to type in the following three lines of data and alter the variable BL to the number of data lines you have in your finished program, less 1.

The small basic program Vehicles Display will print the sprites variously in expanded form on the screen in both side and top views simultaneously. To hold on any sprite enter the same number for Start and End.

Any Sprite Editor program will enable you to change and adapt the individual sprites to your own requirements.

See listings on page 77.

DATTEL ELECTRONICS

3 SLOT OTHERBOARD

wear and tear on your
ansion Port

- cepts 3 cartridges. ☐ Onboard safety fuse.
- each in/out any slot. ☐ High grade PCB.

DISKMATE II

the features of Diskmate II (see ad).
led in seconds - with full
uctions. **ONLY £9.99**

PRINTER IV

Now you can turn your MPS 801
into 4 printers in one!!

- ☐ Alternative character set ROM - fitted in seconds.
- ☐ All four sets have true descenders.
- ☐ 100% compatible with all software.
- ☐ Descender: ☐ Eclipse.
- ☐ Scribe. ☐ Future.
- ☐ Choose any set at the flick of a switch.

"For anyone who uses their printer
often this chip is a must. It's quick
and easy to use and the end
results are impressive" - Your
Commodore, Jan 87.

ONLY £19.99

TURBO ROM II

Turbo Rom II is a replacement for
the actual kernal inside your 64.
It provides superfast load/save
routines.

- ☐ Loads most programs at 5-6 times normal speed.
- ☐ Saves at 5-6 times normal.
- ☐ Improved DOS support including 10 sec format.
- ☐ Programmed function keys: load, directory, old, etc.
- ☐ Return to normal kernal at flick of a switch.
- ☐ PCOPY - 250 block file copier.
- ☐ FLOAD - special I/O loader.
- ☐ Plus lots more.
- ☐ Fitted in minutes - no soldering usually required. (On some 64's the old ROM may have to be desoldered).

ONLY £14.99

BLAZING PADDLES

A complete lightpen/graphics illustrator package.

- ☐ A fully icon/menu driven graphics package of a calibre which should cost much more.
- ☐ Complete with a fibre optical lightpen system for pin point accuracy.
- ☐ Multi feature software including:
 - Range of brushes • Airbrush • Rectangle • Circle • Rubberbanding • Lines • Freehand
 - Zoom mode • Printer dump • Load/save • Advanced colour mixing - over 200 hues!!
 - Cut and paste allows shapes/windows/pictures to be saved to/from tape/disk.
- ☐ Blazing Paddles will also work with many other input devices including: Joysticks, Mice, Graphics Tablets, Trackball etc.
- ☐ Pictures can be saved from Action Replay and edited with Blazing Paddles.

Complete Blazing Paddles & Lightpen **ONLY £24.99**

Blazing Paddles available separately for **£12.99**

TOOLKIT IV

The ultimate disk toolkit for the 1540/1541

☐ A disk toolkit is an absolute must for the serious
disk hacker. Toolkit IV has more features than most
for less.

☐ DISK DOCTOR V2 - Read and write any track
and sector including extra and renumbered
tracks. Repair damaged sectors. Look underneath
read errors.

☐ HEADER/GAP EDITOR - Decodes and
displays ALL header information including off
bytes and header gap. Rewrite the entire header
and header gap. Renumber sectors. Also edit any
sector tail gap.

☐ DISK LOOK - Sort directory. Recover lost
files. Display file start/end addresses.
Disassemble any file program directly from the
disk to SCREEN or PRINTER including
undocumented opcodes. Edit Bam. Much, much
more.

☐ FILE COMPACTOR - Can compact machine
programs by up to 50%. Saves disk space.
Compacted programs run as normal.

☐ FAST DISK COPY - Copy an entire disk in
2 minutes or less using single 1541.

☐ FAST FILE COPY - Selective file copy. Works
at up to 6 times normal speed.

☐ FORMATTER - 10 second format an entire
disk or format any individual track or half track
0 to 41. Redefine any of 30 parameters to create
or recreate unique disk formats.

☐ ERROR EDIT - Quickly find and recreate all
read errors including extra and renumbered
tracks or sectors and half tracks from 0 to 41.
Even recreates data under errors and allows you
to redefine any necessary parameters.

ONLY £9.99

RAM DISK

- ☐ Turn your Smart Cart into a 32K RAM/disk.
- ☐ 32K of instant storage area for files/programs.
- ☐ Load/save instantly.
- ☐ Disk type commands: load, save, directory, scratch.
- ☐ Program data retained when computer is switched off.
- ☐ Full command

ONLY £9.99

set with instructions.

ROBOTEK 64

Robotek 64 is a comprehensive hardware/
software package which enables you to connect
your 64/128 to the outside world.

☐ 4 output channels - each with onboard relay

☐ 4 input channels - each fully buffered TTL
level sensing.

☐ Analogue input with full 8 bit conversion.

DIGITAL SOUND SAMPLER

- ☐ The new sampler allows you to record any
sound digitally into memory and then replay it
with astounding effects.
- ☐ Playback forwards/backwards with echo/
reverb/ring modulation etc.
- ☐ Now with full sound editing module to produce
outstanding effects.
- ☐ Full 8 bit D to A and ADC conversion.
- ☐ MIDI compatible with suitable interface.
(i.e. Datel unit for £29.99, see ad).
- ☐ Live effects menu includes real time display
of waveforms.
- ☐ Line in/mic in/line out/feedback controls.
- ☐ Powerful sequencer with editing features.
- ☐ Load/save sample.
- ☐ Up to 8 samples in memory at one time.
- ☐ Tape or disk (please state).
- ☐ Complete software/hardware package **£49.99**

☐ Com-Drum software is available separately at
£9.99 to turn your Sampler II into a Com-Drum
system as well as a sampling system.

COM-DRUM

Digital Drum System

- ☐ Now you can turn your computer into a digital
drum system. ☐ Hardware/software package.
- ☐ 8 digital drum sounds in memory at one time.
- ☐ Complete with 3 drum kits.
- ☐ Real drum sounds - not synthesised.
- ☐ Create superb drum rhythms with real and
step time. ☐ Full editing. ☐ Menu driven.
- ☐ Output to hi-fi or through tv speaker.
- ☐ Load/save facilities. (state tape
ONLY £29.99 or disk)

COM-DRUM EDITOR

- ☐ 24 drum sounds supplied on disk to enable
you to construct your own drum kit.
- ☐ Re-arrange sounds supplied with a Com-Drum
to make new kits.
- ☐ With sound sampler hardware you can record
your own kits. ☐ Load/save facilities.

ONLY £4.99 disk only

Model & Robot Control made easy

- ☐ Voice input for voice control.
- ☐ Software features: test mode/analogue
measurement/voice activate/digital readout etc.
- ☐ Excellent value! **ONLY £39.99**

including hardware/software/
mic etc. (State tape or disk)

DATTEL ELECTRONICS

256K SUPEROM EXPANDER

- ☐ Now you can select from any of 8 32K EPROMs instantly.
- ☐ 8 sockets to accept up to a 32K EPROM in each.
- ☐ On board operating system - no programs to load.
- ☐ Program your own EPROMs using our EPROM programmer.
- ☐ No need to have loads of cartridges - just make a selection from the Superom menu.
- ☐ Directory of utilities on power up.
- ☐ Fully menu driven on power up.
- ☐ Select any slot under software controls.
- ☐ Unique EPROM generator feature will take your own programs - basic or m/c and turn them into autostart EPROMs. (EPROM burner required).
- ☐ Accepts 2764/27128/27256 EPROMs.
- ☐ On board unstopable reset.

ONLY £29.99

4 WAY KERNAL BOARD

- ☐ This board fits in place of the kernal in your 64 and accepts a 16K or 32K replacement kernal giving 2 or 4 different operating systems.
- ☐ Just flick the switch supplied to select between systems.
- ☐ This is a carrier only - ready to accept your own chip.
- ☐ Now you can have all your different systems available at one time.
- ☐ Full instructions. ☐ Fitted in minutes.

ONLY £8.99

5 WAY KERNAL EXPANDER

- ☐ A multi carrier board accepts up to 3 chips.
- ☐ Fits in place of original kernal of 64.
- ☐ Three sockets - one for the original kernal plus two others each accepting a 16K chip - that's 5 operating systems available at the flick of a switch!
- ☐ Fitted in minutes.
- ☐ Full instructions.

ONLY £12.99

RESET CARTRIDGE

- ☐ Unstopable reset button.
- ☐ Resets even so called "unstopable" programs.
- ☐ Add pokes from magazines etc.
- ☐ Fits in cartridge port.
- ☐ Simply plug in.

ONLY £5.99

QUICKSHOT TURBO™

- ☐ Top quality fast action.
- ☐ Top & trigger fire buttons.
- ☐ Rapid fire/auto action.
- ☐ Suction feet for one handed action.
- ☐ Extra hardwearing.

ONLY £12.99 for 64/128

ONLY £13.99 for C16

16K EPROM BOARD

- ☐ Accepts 2 x 8K EPROMs.
- ☐ Switchable to configure as 2 x 8K or 16K or off.
- ☐ On board unstopable reset.
- ☐ Full instructions.

ONLY £8.99

DISK NOTCHER

- ☐ Quickly and easily double your disk capacity.
- ☐ Use both sides of your disks.
- ☐ Simple to use.
- ☐ Takes seconds.

ONLY £4.99

DEEP SCAN BURST NIBBLER™

- ☐ The most powerful disk nibbler available anywhere, at any price!
- ☐ Burst Nibbler is actually a two part system - a software package and a parallel cable to connect the 1541/1570/1571 to 64/128 (state type).
- ☐ What gives Burst Nibbler its power? Conventional nibblers have to decode the data from the disk before it can transfer it using the serial bus - when non standard data is encountered they are beat. Burst Nibbler transfers data as raw GCR code via the parallel cable without the need to decode it so you get a perfect copy of the original.
- Will nibble upto 41 tracks. ● Copy a whole disk in under 2 minutes. ● Full instructions.
- Regular updates - we always ship the latest. ● Fitted in minutes - no soldering usually required.
- Full or 1/2 tracks. ● No need to buy parallel cable if you have Disk Demon/Dolphin etc.
- Cable has throughbus extension for other add ons.
- ☐ Whether to choose FastHack'em or Burst Nibbler? Fast Hack'Em is unbeatable value as an "all-rounder" - with nibblers, 1 or 2 drive copy, format, file copy, 1571 copy etc. etc., so if you have a more general requirement perhaps FastHack'Em is for you. Burst Nibbler is a pure nibbler second to none, for the reasons stated. So if it's just making backups you are interested in, there is no other product to beat it.

ONLY £24.99 COMPLETE

SOFTWARE ONLY £12.99 CABLE ONLY £14.99

EPROMMER 64™

- ☐ A top quality, easy-to-use EPROM programmer for the 64/128.
- ☐ Fully menu driven software/hardware package makes programming/reading/verifying/copying EPROMs simplicity itself.
- ☐ Will program 2716, 2732, 2764, 27128 and 27256 chips. 12.5, 21 or 25 volts.
- ☐ Fits into user port for maximum compatibility with cartridges/Superom Board etc.
- ☐ Full feature system - all functions covered including device check/verify.
- ☐ We believe Eprommer 64 is the most comprehensive, most friendly and best value for money programmer available for the 64/128.
- ☐ Ideal companion for Superom Board, Cartridge Development System, our kernal expanders or indeed any EPROM base project.
- ☐ Comes complete with instructions - plus the cartridge handbook.

ONLY £39.99 COMPLETE

DATTEL ELECTRONICS

PROFESSIONAL DOS™ MIKROTRONIC £64.99 POST FREE with Disc Demon operating system "The world's fastest parallel operating system"

- ☐ Loads a typical 202 block program file in under 3 seconds!
 - ☐ 60x faster load (PRG files).
 - ☐ 25x faster load (SEQ files).
 - ☐ 20x faster save (PRG files).
 - ☐ 20x faster save (SEQ files).
- PLUS AN ADVANCED COMMAND STRUCTURE INCLUDING:**
- ☐ Fast format - up to 40 tracks (749 blocks).
 - ☐ 16 function keys: list, run, load, directory, format, save, old, verify, etc.
 - ☐ Flood will fastload files up to 250 blocks (other similar systems will only cope with 202 blocks).
 - ☐ Number conversion. ☐ Reset.
 - ☐ Unique built in file copier will copy files up to 250 blocks like lightning - multiple copy options - perfect for copying Action Replay files.
 - ☐ Highly compatible with commercial software - can be switched out for non compatible programs.
 - ☐ Perfect for use with Action Replay 3 - a typical AR3 backup will reload in about 3 seconds - yes 3 seconds!
 - ☐ Speeds up other DOS functions including verify, scratch etc.
 - ☐ Comes complete with superfast file and whole disk copier free!
 - ☐ Screen on or off during loading.
 - ☐ Enhanced command set - over 30 new commands.
 - ☐ Easily fitted - Disk Demon plugs inside the 1541 and the new operating system chip plugs inside the C64/128. Fitting takes only minutes and usually requires no soldering.
 - ☐ User port throughbus supplied free - you could pay \$15.00 for this alone.
 - ☐ Supplied complete - no more to buy.
 - ☐ Works on C128/1541 in 64 or 128 mode.

**C128 version
£69.99**

BLUE CHIP DRIVE • Fully C64/128 compatible.

- ☐ At last a top quality drive at a sensible price.
- ☐ Super slimline case
- ☐ External power supply for cool operation.
- ☐ Direct drive motor.
- ☐ Supplied complete with all cables - no more to buy.
- ☐ This drive is now probably the most compatible drive available for the Commodore. More so than even Commodore's own 1541C. Much more so than other so called compatibles. In fact we have been unable to find a program including the latest that would not work. (At time of Press).
- ☐ No need to look elsewhere - this is the best.

ONLY £139.99 POST FREE
(If you require courier delivery add \$5.00).

ULTRA CRUNCHER

• The ultimate cartridge based program compactor.

- ☐ Compacts by up to 30%!
- ☐ More programs for disk.
- ☐ 3 compacting programs on one cartridge.
- ☐ Fast loading/saving routines - works with Disc Demon.
- ☐ Can even further compact AR III files!
- ☐ 250 block file copy function.
- ☐ Full DOS support including fast format.

ONLY £12.99 on cartridge.
Available as chip only for 286K
Superior Board for only **£7.99**

FAST HACK'EM™

• Multi Module Disk Nibbler - all on one disk.

- ☐ Single 1541 Nibbler - Copy a disk in 2 minutes.
- ☐ Auto Nibbler - Copy an entire protected disk in 3 minutes.
- ☐ Super fast File Copy - Under 9 seconds typically.
- ☐ Copies with Fat Tracks.
- ☐ Superfast Copy - Entire disk in 36 seconds with verify.
- ☐ Twin Drive Copier - Even faster!
- ☐ Plus unique "Parameters" mode. These files "Unlock" the more heavily protected programs with a parameter for a particular brand or even single program.
- ☐ No other product is such a good "All Rounder" at this price its unbeatable.

ONLY £9.99 POST FREE

DISKMATE II The Disk Utility Cartridge

- ☐ Disk fastload cartridge.
- ☐ Up to 5 times faster.
- ☐ Fast save. ☐ Fast format (10 secs).
- ☐ Improved DOS - single stroke commands - load/save/dir/old etc.
- ☐ Redefined function keys for fast operation of common commands.
- ☐ Powerful toolkit commands including: old/delete/merge/copy/append/autonum/linesave etc.
- ☐ Plus a full machine code monitor - too many features to list but it has them all!
- ☐ Special switching techniques make Diskmate invisible to the system. Therefore it is a more compatible fastloader than other types.
- ☐ Diskmate II is

ONLY £14.99

MIDI 64

A Full Midi Interface for the 64/128 at a realistic price

- ☐ MIDI in. ☐ MIDI thru. ☐ 2 x MIDI out.
- ☐ Compatible with most leading software packages including: Sell, JMS, Advanced Music System, Joreth, Steinburg etc.

ONLY £29.99

MOUSE

- ☐ CBM 64/128 mouse.
- ☐ Wide compatibility with software including: Blazing Paddles.
- ☐ Works by mimicking joystick so will work in any joystick application including graphic packages only designed for joystick.
- ☐ Functions on either joystick port.
- ☐ Optical system operation.

ONLY £24.99

Bothersome Basic

The old truism garbage in, garbage out is still relevant today, especially when using the INPUT command.

By Norman Doyle

One of the most common reasons why a program crashes is through unexpected responses when the user has to input some data through the keyboard. Trapping these unorthodox entries not only calls for an alert programming mind but also for a rethinking of the whole situation.

The problem with the Basic INPUT command is that it runs according to its own rules. This is fine if the users understand what these conditions are but not very forgiving if they don't. If the input is stored as a string variable the problems are easily rectified but using a numerical variable causes real problems.

String inputs which take up less than two screen lines will rarely cause problems as long as the string does not include a comma or a colon. Either of these symbols act as a terminator and only that part of the entry before the first occurrence of one of these symbols will be accepted as input, the rest is ignored. The computer responds to an incomplete acceptance of the attempted input with a rather unfriendly EXTRA IGNORED message.

A simple program such as;

```
10 INPUT "ENTER MESSAGE": A$
20 ?A$
```

would respond to an input such as:

```
I, MASTER OLIVER TWIST, WANT
MORE
in the following way:
?EXTRA IGNORED
I
```

If the user made a mistake and went berserk with the delete key so as to totally erase the ENTER MESSAGE prompt, further chaos would result with the following response:

```
?EXTRA IGNORED
R TWIST
```

The part typed over where the original prompt was up to the cursor's old starting position has been ignored, as well as the extra piece after the comma.

The number of characters typed as an input can also cause problems. If the input continues beyond two screen lines and onto a third, only the characters on the third line will be accepted and no error message will appear.

The only way around this is to get confirmation of each entry with a check routine such as:

```
10 INPUT "ENTER MESSAGE", A$
20 ? "PLEASE CONFIRM THAT
YOUR MESSAGE WAS: "
30 ?A$?
```

```
50 ? "PRESS 'Y' OR 'N' "
60 GET R$: IF R$ = "Y" GOTO 90
70 GET R$ = "N" GOTO 10
80 GOTO 60
90 REM REST OF PROGRAM
```

Of course this only confirms or denies that the entry was correct. A total novice might keep trying to type in the same message until boredom and frustration sets in. The only foolproof way out is to give specific details of what can and can't be done when an error is confirmed. Quite a painful and dull way to write an interactive program.

As if this wasn't bad enough, numerical variables can be worse! At least the incorrect string inputs don't result in the termination of the program. With an interactive maths program it's always tempting to enter very large numbers. Try entering a vast number into this program:

```
10 INPUT "ENTER A NUMBER": A
20 ?A
```

As the number increases it is eventually treated as an exponential value such as 1.2345E+30. If this exceeds the maximum number that the computer can deal with (1.70141884E+38), an OVERFLOW IN LINE 10 error will be generated and the program will crash out and return to

the READY prompt and direct keyboard control. Not very impressive in a complex accounts program.

This can only be avoided if the number is entered as a string such as A\$ and then evaluated and stored as a numerical variable, A, after complex processing. There must be a better way!

The best way, though long winded, is to use the GET command and build a string character. In this way you decide which characters may be entered.

First of all a suitable prompt message and a GET loop must be set up:

```
10 ?"ENTER MESSAGE: ";
20 GET A$:IF A$="" THEN 20
```

Now we need to print the characters on the screen as each is typed in and to store them as a separate string, B\$:

```
5 B$=""
100 ?A$;B$=B$+A$;GOTO 20
```

The difficult part is deciding which characters will be accepted and which will be rejected. First we'll assume that the message is going to be a mixture of numbers and letters (alphanumeric characters).

Every letter and number has a value assigned to it under a system known as ASCII (the American Standard Code for Information Interchange). CBM has its own version of this which is officially called Commodore ASCII (pronounced *askey*) but has commonly become known as PETASCII after Commodore's old range of computers which first used this system.

Under this system the numbers zero to nine have values from 48 to 57 and 'A' to 'Z' have values ranging from 65 to 90. The numbers 58 to 64 cover such things as the question mark, semicolon and colon, so to make things simple, we may as well include those in acceptable range. Thus we get a range of 48 to 90.

This range does not include some other useful punctuation marks such as the comma, full stop or exclamation mark, nor does it include the value of 32 which represents a space. Fortunately these can all be incorporated by stretching the lower limit down to 32.

At this point we can use the *greater than* and *less than* facilities as follows:

```
80 IF A$ < CHR$(32) AND A$ > "Z"
THEN 20
```

This means that each character is checked to see if its ASCII value lies between 32 and 90, if not it is rejected and the program leaps back to get another keypress.

With the program as it stands B\$ can be stretched to hold 255 characters and no more. We need a delimiter which will stop any user from trying to type in more than that number:

```
90 IF LEN (B$)=255 THEN
?:"MESSAGE TOO LONG.
PLEASE TRY AGAIN":GOTO 5
```

There are kinder ways to do this but that will be covered in a later article.

The routine so far will work as long as the user types in the message correctly. What if a mistake is made?

First we must check for a DEL keypress. To jump to the routine for deleting the last letter from B\$ and from the screen. Even the DEL key has a value assigned to it and this is 20.

If you enter ?CHR\$(90), a 'Z' will be printed on the screen, similarly CHR\$(20) will cause a deletion of a character. So we can easily complete one of the demands of correcting a mistake by using the CHR\$ command:

```
30 IF A$ < > CHR$(20) THEN 70
50 ?CHR$(20);
```

Obviously this deals with the screen but what about B\$? It has to be dealt with using the string manipulation commands. What we need is to keep the left-hand side of B\$ and disregard the last letter. Putting it another way we reduce the length, LEN(B\$), by one. LEN(B\$)=LEN(B\$)-1 is an illegal command but

```
60 B$=LEFT$(B$,LEN(B$)-
1):GOTO 20
```

will do the trick until LEN(B\$)=0. A string cannot have a negative length and an error message would be generated if nothing were done. To trap this problem the following line will act as a filter:

```
40 IF LEN(B$)=0 THEN 20
```

The final stage of the line input routine is to check for a carriage return, ASCII 13, and exit to the rest of the program:

```
70 IF A$=CHR$(13) GOTO 110
110 ?B$;LEN(B$)
```

Although this is better than the normal INPUT command, it's not perfectly foolproof and it does take up a lot more space than the normal input procedures. This can be compensated for by parameter swapping. As you can see from the slightly modified Listing 1, the routine is set up as a subroutine. If the main program avoids using the parameters mentioned (A\$,B\$) you can GOSUB to this routine. On RETURNING B\$ can be simply renamed with a command such as NEWNAME\$=B\$ and the routine can then be called again for the next input later on.

For numbers the acceptable range needs only to be ASCII 48 to 57 with special allowances if decimal points, currency symbols or arithmetical operators are expected.

Evaluation of B\$ would be a conversion to a numerical variable after first shortening the string to a manageable length for the computer to deal with. This is rather like deciding how many significant figures, and hence the degree of accuracy, of a calculation. In this way numbers in excess of 1.70141884E+38 can be rejected before the program tries to use them and subsequently crashes out.

The Deep End

For the more accomplished, the INPUT command can be forced to accept colons and commas by skillful trickery. Before using the INPUT command, quotation marks are placed in the keyboard buffer as though they had been typed there.

To do this ASCII 34 is poked into the first buffer byte at 631 and the buffer queue at 198 is informed that there's one character already waiting there. When the INPUT command is executed, the quotation mark is printed alongside the input question mark.

```
10 POKE 631,34:POKE198,1
20 INPUT"ENTER MESSAGE":A$
30 ?A$
```

I regret that I cannot answer your problems by phone but if you have any queries about Basic routines or about these articles, please send them to Bothersome Basic, Your Commodore, 1 Golden Square, LONDON W1R 3AB enclosing an sae and any relevant printouts or recordings. VC

GEOS INSIDE and OUT

A thorough guidebook to effectively using GEOS, whether you are a beginner or a seasoned user. Topics covered include geoWrite & geoPaint applications, a utility to convert your own programs to GEOS format and create custom icons, creating custom windows, details of GEOS file format, a digital display clock and a single step simulator to display GEOS memory locations and registers. 293 pages.

Optional diskette £5.00

Price: £12.95

NEW GEOS TRICKS & TIPS

A collection of helpful hints and techniques with easy to understand explanations. Revised to cover GEOS 1.3. Includes a font editor to create up to 64 point text and a machine language monitor. 265 pages.

Price: £11.95

Optional diskette £5.00

SPECIAL OFFER: Both GEOS books for £22.50

CADPAK Enhanced Version! For C-64 or C-128

CADPAK is a superb tool for computer aided design and drawing. Using either the keyboard or optional lightpen you draw directly on the screen to create and edit pictures, drawings, layouts and renderings—quickly, accurately, creatively. The new dimensioning feature allows exact scaled output on your designs. Choose from the menu options and draw on the screen at an exact location using our AccuPoint cursor positioning. Using the two graphics screens, you can draw LINE's, BOXes, CIRCLES, ELLIPSES; fill with solid colors or patterns; freehand DRAW; COPY sections of the screen; ZOOM-in to do detailed design on a small section of the screen. With CADPAK's improved object editor, you can define and save furniture, electronic circuitry or machinery as intricate as the screen resolution permits. Hard copy to most dot matrix printers. Perfect for all your design needs.

For C-64 £24.95
For C-128 £34.95

Cadpak-64 + Mouse £49.95
Cadpak-128 + Mouse £59.95
Upgrade Disk £5.00
Upgrade Disk + Mouse £29.95
(Return Original Disk)

LIGHTPEN (standard version) £12.95
(1901 or green screen monitor) £14.95
Commodore 1351 Mouse £29.95

The C64 version works at 320x200 resolution with hardcopy to most printers in single or double size. The C128 version works at 640x360 resolution, though an 80 column monitor is not required. Hardcopy various sizes.

NEW - Both CADPAK packages now include versions to work with the Commodore 1351 mouse (no other mouse is suitable).

Ackroyd's Saga

Let your computer take the strain of learning tables.

By Allen & Margaret Webb

In case any regular readers of my Teacher's Pet column haven't worked it out for themselves, I've got a pretty shocking confession to make. I am very old fashioned, both in the way I bring up my children and in their education. I believe in old fashioned virtues of politeness, honesty and respect for one's elders and those old hat school subjects of spelling and learning tables. Both of these have been out of favour; the former because it was believed that it stifled creativity, the latter in some cases simply because the diversity of the curriculum pushed these subjects to the bottom of the pile. Luckily the primary school that both of my children attended believed that learning tables was important and table tests were a regular occurrence.

A look around the shops will confirm the need for mental arithmetic and multiplication tables. How many

times have you watched as simple calculations have been worked out on scraps of paper or the ubiquitous calculator when they could have been computed just as quickly in the brain?

Improving Numeric Skills

Ackroyd's Saga is the first of two games aimed at helping the learning process of mental arithmetic skills. In the game, the 0 to 12 times tables are tested. The nought times table is included since it is a difficult concept to grasp. In the game, you play the role of a trainee knight searching for the parts of the key which will let you into Ackroyd's castle. (Ackroyd is the usual evil king.) On your way to the castle you will encounter various nasties. You must fight these if you

want to get passed them, and 'fighting' involves answering tables questions. You answer an odd number of questions. If you get more correct than wrong, you win.

There are five levels in the game with each level posing questions on different tables. The easiest level deals with 0 to 3 times tables, the most difficult deals with 0 to 12. In addition, the levels give you different times to respond. The default values give ten seconds at the easiest level and six seconds at the top level. You can change the times and number of sums if you wish by choosing the edit option in the game loader.

The game is controlled by a joystick (in port 2) or keyboard (S: moves south, E: east, N: North, W: West). To answer questions you simply type in the answer and press Return. Delete will clear any mistakes.

LOADER	SAVE name	Start Address	Finish address
1	SPRITES	12288	14784
2	CHARSET	10240	12287
3	HOUR-GLASS	8192	8920
4	OBJECT.1	6144	7573

The game comprises six modules. To convert the loaders to useable code, use the following procedure:

Type in POKE 44,64: POKE 64*256,0:NEW

LOAD and RUN the loader
LOAD and RUN the Code Saver routine using the details given in the table. You don't have to use the suggested names but if you don't, you must amend the BASIC portion accordingly.

Once you have completed this procedure for each loader, you can test them by LOADING them all (don't forget the secondary address... LOAD "name",8,1 or LOAD "name",1,1). And type in the line:
SYS 6144:SYS6153

You should get the display and be set a question to answer. If this happens, all is well.

The BASIC program controls the whole program. You should note that the first portion assumes that you are loading from disk. Cassette users must change the device number.

The game play is quite simple. The knight walks in the direction you specify. If you use keyboard control, auto repeat allows you to hold the keys down. When you reach the edge of the window, the next part of the map is

on. If you enter a square with a part of the key, it is automatically yours. Find all four keys and reach the castle door and the game ends.

Now we will complete the loaders and show you how to run the game. The last two loaders are converted to code as before but with a slight difference:

Type in POKE 56,128: CLR
LOAD and RUN the loader
LOAD and RUN the Code Saver routine using the details given in the table.

To play the game, reset the computer by turning it off and on or by using SYS 64738. You then just LOAD and RUN the BASIC portion.

Next time we will give a map of the

LOADER	SAVE name	Start Address	Finish address
5	OBJECT.2	32768	36176
6	MAP	36864	40545

displayed. If you enter a square with a nasty, you must fight. If you win, the nasty vanishes. If you loose, you are dumped on the last square you were

game and an editor which will allow you to change the locations of the key parts and the nasties.

See listings on page 77.

YORK ELECTRONIC RESEARCH Commodore 64/Plus 4 Products

6502 ASSEMBLER 64/Plus 4* tape/disk* £12.99

A sophisticated two-pass symbolic assembler and text editor
which supports tape and disk filing. The assembler, the editor,
and your source and object code may all be resident in memory
simultaneously, facilitating rapid and interactive code develop-
ment. Recently extended manual with many examples.

Z80 EMULATOR/CROSS-ASSEMBLER 64 only disk £12.99

A unique integrated Z80 development package. The emulator
compiles Z80 source code into optimised 6502 which runs on
the 64 at approximately one sixth the speed of a 2MHz Z80. It
supports all but 20 of the 688 Z80 operations, calls to 6502
routines, and interrupts. The cross assembler generates hex or
binary Z80 object files. The disk also contains a powerful editor
and several example programs.

BI-DIRECTIONAL RS232 INTERFACE WITH
COMMUNICATIONS SOFTWARE 64 +4* .. tape/disk* £29.99

The 64 KERNAL supports RS232 via the user port. This interface
provides the necessary voltage conversion for direct connection
to RS232 printers, modems and other devices. It is compatible
with Easyscript and Superscript. The unit is supplied with 1
metre of cable (add 75p per extra metre*) terminated in a 25-way
male (or female*) D-connector. The software includes a
terminal emulator which supports split baud rates and auto-dial,
file transfer utilities, a menu driven port initialisation program,
and a transparent printer driver which vectors the KERNAL to
redirect device 4 printer output to the RS232 port.

*Please specify.

consult our review pages.*

Que-dex

Inspired by Gremlin's Bounder, Que-dex is an arcade game in which you must look before you leap if you're going to get to the top of the high score table.

Que-dex consists of ten tracks of planes that can be attempted in any order but only the very brave or stupid dive straight into plane ten.

In plane one you simply have to complete a series of exercises that will prepare you for what's to come. In the other planes you must reach the GOAL before the time runs out. To get to the goal you will have to negotiate a maze, travel long lifts and through teleports, avoid ground that drains your time and areas that just disappear leaving you on the way to oblivion. You will have to get around locked doors that are opened only by finding specific keys. To add to your problems some keys remain invisible until you're next to them, and are usually next to a killer Skull and Cross bones, where one wrong move will cost you that game.

However, you can get some help from objects you can pick up such as amulets that reveal the GOAL and objects that give you extra speed or more time and sound surprise features that may help or hinder you.

At the end of each plane you have a chance to pick up some extra points in a bonus screen and a chance to rest before attempting the next plane. This game would be tough enough without the time limit, with it, it's almost impossible.

T.H.

Starfox

In the unofficial sequel to Skyfox you are Hawkins and your mission is to destroy the aliens that have invaded the protective Rubicon cube that surrounds eight planets.

The standard Starfox is equipped with a turbodrive that will send you hurtling through space but will also drink fuel at an alarming rate and a standard laser. However, you can improve your chances and your craft by docking with motherships that orbit the eight planets and choosing from the selection of weapons that include energy bolts, shockers and more powerful lasers.

You'll need this extra weaponry to wipe out the invading convoys of aliens that come at you ten at a time. If you haven't got the right weapon you may have to shoot each alien four times to destroy it.

The aliens don't actually fire at you but they do exhaust your fuel supply which will cost you the game. You can refuel at a planet or from a refueling ship but only if you can find one in time.

Starfox is a game that will require its players to invest some time in it before they become hooked. Once they've completed a few levels (this will take some time) they will become hooked by it.

Indiana Jones and the Temple of Doom

Indiana Jones is set to burst onto the small screen in the C64 conversion of the Atari coin-up version of the film.

Armed with just his trusty whip Indy must fight off thuggee guards and snakes as he attempts a three stage game. In part one he must rescue children trapped in cages by whipping the locks off. These cages are spread throughout a cave network linked by ladders and ledges as

well as posts that our hero can attach his whip to and swing across Tarzan style. If he manages to free all the children he can escape in a mine car and into part two.

This is the shortest part of the game and is simply a ride in a mine car down a broken track. When you come to a break in the track leaning over will avoid disaster, but may bring you into range of the Thuggee guards or into the path of the pursuing car. This is an all or nothing stage as taking a wrong turn will cost you a life but once you've learned the route it couldn't be easier.

At the end of the track you enter the Temple of Doom and can attempt to retrieve one of the Sankara stones. Once again you're attacked by thuggee guards and slithering snakes but if you get your timing right you can swing over the firey gorge, grab a stone and escape only to find yourself back in the caverns with more children to rescue.

As a conversion the game is reasonably close to the original (although the music is terrible). Unfortunately, the original game rapidly became repetitive, and desperately needed three or four more levels. A good conversion but there have been better games to convert.

Captain America

When America is threatened with total annihilation who do you call. Superman? Ghostbusters? No! This time it's Captain America – the defender of the Constitution who must save the day!

Dr. Meglomann, a man who the CIA claimed they killed in Cuba in the early sixties has emerged from hiding and claimed the Presidency of the US of A, and if power isn't handed over he'll fire a rocket packed full of killer virus at North America and wipe everyone out.

One hundred elite marines stormed the mad doctors base but were all killed by the deadly virus. Now you, Captain America must save the world!

The doctor is holed up in the tube of Doom and it's not going to be easy to get him out. The tube of Doom consists of three concentric tubes packed with laser firing robots. Your mission is to fight your way through all three levels to destroy the rocket, and bring Dr. Meglomann to justice. As the game begins you are sitting at the controls of the Orbivator, an elevator that runs between the outer and middle cylinders. From this you can gain access to the rooms of the tube of Doom.

The deeper you get into the tube the greater the level of the virus that will slowly overcome even Captain America's superhuman strength and so you must stay within your immunity range. You must also find a way to increase your immunity so you can explore these deeper levels.

Perhaps the answers lie in the rooms that you can reach by battling the robots in each level. Here you'll find more laser firing and homing enemies as well as a source for your Captain America shields (your only weapon) and maybe even a few clues.

Captain America is a massive arcade adventure in which your reactions will have to match your brain power if you're going to survive long enough to save the day. T.H.

Originality: 7/10. **Playability:** 7/10. **Graphics:** 6/10. **Value:** 7/10.

On Court Tennis

On Court Tennis is another of the Activision Gamestar games to be re-released by Firebird at a budget price. This time you can pick up your racket and stride out onto the centre court as Ivan, Bjorn, John or Jimmy to take on a

computer or human opponent in a match lasting three or five sets.

As the players take their places on court the temptation is to write the game off as having poor graphics but gradually the addictiveness of the gameplay takes over. Even when you're 5-0 down you still think you've got a chance!

The game is controlled entirely by the joystick with it's movements deciding the strength and direction of the shot. This, of course, depends on how well you time your shots and whether you play the right shot at the right time. With that lot to think about it's lucky that the computer automatically moves you to the ball so you can concentrate on the shot.

The result is a tennis game that was over priced in the full-priced market, but at last as found it's right value for money. It's limited and at times not very pretty but as a cut priced tennis game it has the advantage. T.H.

Originality: 4/10. **Playability:** 6/10. **Graphics:** 4/10. **Value:** 5/10.

Beach Head II

Beach Head II, the game that shocked the world with it's realistic screams is back as part of Mastertronic's Americana range. In this, the sequel to the highly successful Beach Head the evil, warmongering, bloodthirsty, power crazed maniac dictator known as the dragon is out for revenge and plans to destroy the forces that wrecked his fortress in the original game, that means you.

As in Beach Head, Beach Head II is a multi-stage arcade game, only this time you can play either side in a head to head contest.

The first sequence is a two part game with the dictator making a massive gun that tries to blast the good guys as they're dropped by helicopter behind the first line of defences. Once they've all been dropped you must bring

them forward while running the gauntlet of the giant gun. If they're hit, they let out a bloodcurdling scream or yell for a medic! As you approach the gun you can send one man over a wall while the gun will be destroyed but soon replaced so you have to move quickly.

In stage two you must rescue the men captured by the dictator by turning their own gun against them. This isn't going to be easy as the prisoners escaping across the courtyard can be shot by men on walls, blown up by mines thrown out from trap doors, killed by a tank or slowly and loudly crushed by a tank.

Part three is a Zaxxon style screen in which you must fly the escaped prisoners to safety in three helicopters, along as you can get past the Dragon's defences and finally in part four, your in man to man combat with the dictator in his underground caves. To win you must hurl pointed sticks at the villain and escape his deadly throws.

Beach Head II is a loud, action-all-the-way arcade games that won't win any good taste awards. T.H.

Nebulus

Nebulus is yet another incredibly addictive Hewson arcade game in which you, a cute little frog like critter, must destroy a series of unauthorised towers that someone has built in the sea. Your job is to climb up to the top of these towers and destroy them.

Unfortunately, this is going to be far from easy. You arrive by mini-sub at the base of the first of eight towers. Around it you can see a series of platforms and lifts that you must navigate as well as tunnels that lead from one side of the tower to the other. Each tower is also patrolled by a selection of nasties. Some can be blasted with your bubble gun, while others are indestructable and must be avoided at all costs. This isn't always easy when you're walking along

platforms that disappear from under your feet, slide you backwards as quickly as you can run forward and gaps that are just further than you can jump.

It all adds up to a great game that adds new lease of life to the addictive platform game format. T.H.

Touchline:

Title: Nebulus. **Supplier:** Hewson Consultants, Hewson House, 56B Milton Trading Estate, Milton, Abingdon, Oxon. **Tel:** 0235 832939. **Machine:** C64. **Price:** £8.95. **Originality:** 8/10. **Playability:** 7/10. **Graphics:** 7/10. **Value:** 7/10.

Action Force

When the evil enemy Cobra attacked the small island of Botsneda, the military installations were destroyed. All except the eastern part which contains some classified information stored on hard disk. This data must not fall into enemy hands. There just isn't time to organise a conventional force attack so they must send in the Action Force.

Lady Jay and Crankcase man the A.W.E. Striker that has been quickly modified for data retrieval and so must be protected by you, Wild Bill, and Flint in the Dragonfly XH-1 helicopter.

The enemy will bombard you with other helicopters, planes, guns and missiles that you must blast and avoid while clearing a path for Striker.

The result is a standard sideways scrolling shoot 'em-up with eight levels that may have some appeal for Action Force fans. Anyone else who wants helicopter action should take Gunship for a test flight.

On the Tiles

Firebird and Odin present the first feline simulation in which you must prowl the streets in search of fish bones to gain control of eight streets.

Unfortunately, all is not purrfect for our furry hero who must avoid the attentions of blood sucking fleas and the draining effect of frogs as well as the fatal touch of kitty hawks and hedgehogs. Luckily, you can regain lost energy for grabbing a sparrow or mouse as you leap from window sill to rooftop.

You can protect yourself from things that cost one of your nine lives by spitting some green unnamed substance at them. However, at times you don't have time to react since you must press the space bar to fire which is never near enough to the joystick to save myself.

On the tiles is a good but tough game which features some nice animation and addictive gameplay.

Super Sprint

Super Sprint is the latest coin-up conversion for the C64 and attempts to recreate the arcade racing game that's been an amazing arcade hit.

Unfortunately, it's impossible to get three players around a C64 and so this conversion has only a one or two player option with the remaining cars driven by drones. These drones never skid or crash but are easily beaten by a skillful player, but will wipe you out if you hurtle around every bend and end up in a smouldering heap. Your car is quickly replaced by one that arrives be helicopter but you will have lost valuable time.

Once you've selected one or two players (and if two either a head to head conflict or a normal super sprint) you can select one of the four tracks that feature tight bends, bridges that obscure your view and gates that open and close to allow you to take short cuts that could win you the race.

On the track you may also find oil slicks that will send you spinning, bonus points and occasionally gold spanners. If you collect three of these spanners in a race you can improve your car by adding super traction, turbo acceleration or a higher top speed or just improve your score with a score multiplier.

Whatever you choose even the experienced champions have to avoid the spinning whirlwind that gets you in a spin if you're caught in it's path.

Super Sprint is a good conversion that will drive racing fans round the bend as they attempt to build a car that can beat all comers.

VC

AMAZING NEW 'TOTAL BACKUP' CARTRIDGE FOR COMMODORE 64 AND 128 (IN 64 MODE)

NEW ACTION REPLAY V.3 FROM DOSOFT UNSTOPPABLE 'TOTAL BACKUP' CARTRIDGE

OUR NEW INNOVATIVE HARDWARE AND SOFTWARE COMBINATION
GIVES YOU MORE POWER, MORE FEATURES, MORE FUN!!

Action Replay V.3 is now more powerful, has more features and will back up more programs than any competing cartridge! It handles the latest protected games! Just plug it into the expansion port then press the Magic Button! Our new hardware design makes this absolutely unstoppable. Now you are in complete control. Tape to tape. Tape to disk. Disk to disk. Disk to tape. No special knowledge is required. It tells you exactly what to do. It's so friendly—and it's a lot of fun too!

Become invulnerable! Action Replay V.3 now has a SPRITE KILLER. Play weird games! The unique SPRITE MONITOR lets you save sprites from one game and load them in another! The mind boggles!

Nothing else offers all these features at this price!

Mega-Freeze

Freeze and save ANY working program—the Magic Button is unstoppable—unlike other cartridges. Also it is now undetectable by software!

Independent

All programs reload without cartridge—and at turbo speed—tape or disk.

Extra Fast

Make all backups at Turbo Speed—much faster than rival cartridges. Dual speed Tape Turbo is up to 3 times faster than commercial Turbos 10 times faster than Commodore.

Super Compact

Intelligent compacting techniques minimise program size into single files. Save 3 or more per disk side.

Multistage Saves

Transfers MORE multistage loaders from tape to disk than any other. And all parts Turbo load—another feature unique to Action Replay.

So Easy to Use

Action Replay V.3 is a delight to use. All functions described on screen. No user knowledge is required.

SpriteControl

Unique Sprite Monitor lets you disable them. Save them! Change them!! Customise your games!!!

Picture Save

Unique! Save ANY Multicolour Picture, including title screens. Compatible with Blazing Paddles, Koala, Graphic Slideshow etc. Built-in Slideshow for tape users.

Disk Fastloader

Superb bonus feature loads five times faster. Takes up NO memory.

Code Inspector

Look at whole memory—program, registers, etc. Everything you need.

Compatible

Fully compatible with Commodore 64, 64C, 128 and 128D in 64 mode, 1541, 1541C, 1570, 1571 and Enhancer Drives, CBM compatible tape recorders, FastDOS, and Turbo ROM—can the others say that???

£29.99 GET MORE FOR LESS!

Buy Action Replay with DiskMate in ONE cartridge ONLY £39.99

Action Replay and DiskMate are also available from Datal Electronics

THERE'S NO STOPPING ME NOW!

DiskMate Cartridge V.2

This is the way Commodore should have their DOS. Single keystroke commands; e.g. LOAD and RUN straight from directory, and much, much more! Works with all drives: 1541, 1570 and 1571.

- 2 minute complete Backup
- Very fast disk functions
- Invisible Toolkit
- 10 second Format
- Powerful 'Floating' Monitor
- SAVE "@@" bug cured
- Takes up NO memory
- Unstoppable reset

£14.99 TERRIFIC VALUE

Buy DiskMate with Action Replay in ONE cartridge ONLY £39.99

Graphics Slideshow

View pix from games, graphic packages or loading screens singly or in sequence. 16 pictures per disk. Turbo load. Disk only.

LOOKING GOOD AT £4.95

SPECIAL OFFER!

Enhancement and Slideshow on one disk ONLY £11.95

100% SUCCESS? WE ASK: WHO'S KIDDING WHO?

Action Replay V.3 will back-up ANY program which ANY other cartridge can—and much more! It also has unmatchable features. For instance, 'Freeze Frame' uses more disk space, saves SLOWER, has a SLOWER tape loader and has NO built-in disk fastloader, NO picture, NO Sprite, NO restart-features, yet costs £10 more!! So, come on, who's kidding who? If Action Replay V.3 doesn't live up to our claims, return it within 7 days of receipt and you can have your money back!

Enhancement Disk

Get even more from Action Replay with this Bonus Disk to back up the new non-standard multi-stage loaders.

GREAT VALUE AT £7.95

Our cartridges carry a twelve month guarantee against mechanical failure.

How to get your DoSoftware

Teacher's Pet

Need some help with your studies? Then take a look at the latest educational packages. Learning can be fun!

By Margaret Webb

Following the dearth of new educational software over the last year or so, it's nice to have enough material to write another Teacher's Pet column. I want to discuss three packages which are all very different in subject matter. While the review copies all came on disks, there are no technical reasons to preclude their appearance on cassette. In fact, Biology, from Software Horizons, came with a cassette inlay.

'O'/GCSE Mathematics

The first package is written by Evelyn Mills, a name which should be familiar to regular readers of *Your Commodore*. This package covers some of the main areas of the 'O' level and GCSE syllabuses in mathematics. Extensive use of a graphics system called Video Basic 64 is used, which allows easy use of high resolution graphics, permitting the drawing of circles and lines and the use of fancy shadings and patterns which is used to enhance the appearance of the package and illustrate certain aspects.

The software covers six main topics which include:

- Basic Mathematics.
- Algebra.
- Geometry.
- Progressive Mathematics.
- Trigonometry.
- Linear programming and statistics.

A final section provides a selection of questions extracted from past 'O' level exam papers. In keeping with most exam based educational software, the material provided is

more of a revision aid for use in conjunction with normal texts and tuition. To give you some idea of the content, I will run through two of the sections - geometry and algebra.

The use of high resolution graphics is put to best use in the geometry section. This section covers a number of topics which include circles, sectors, chords and tangents, plane shapes and polygons. The algebra section, on the other hand, requires less emphasis on graphics. The areas covered include law of indices, cross multiplication, removal of brackets, factorising quadratic equations and simultaneous equations.

The examination section is, as expected, fairly testing and extends beyond the material given in the package. I think however, this is only to be expected.

All sections give a good mix of handy tips or rules of thumb and illustrative examples. There is, however, no error trapping, allowing ridiculous answers to crash the program. Some examples required input from the user - ensuring that he didn't fall asleep! Overall, the content is good and is presented in an interesting manner. Although it may sound carping, there was one irritating aspect.

All sections use Video Basic to generate fancy (and in my view) superfluous displays between topics. Some of these took some time to be drawn and became a little boring. My main objection is that these displays occupy valuable program space which could be used to better effect.

Notwithstanding this point, the

disk is filled well with something like 130K of software on it. One final point is that the examination section expects you to work from the monitor. This won't present a problem for those using their own copy at home but is of little value in a busy classroom since it locks up a machine which could be otherwise used. A better idea would have been to provide an option to allow you to make a hard copy of the examination questions and so that the computer could be released for other users. It would be necessary to return to the machine for the answers.

History Package

The next offering comes courtesy of Duncan Bowen School, Ashford. This software uses the Quill adventure writer to create a novel approach to the teaching of History. History is usually a sure way to send pupils to sleep, as it is always full of dates, places and names and has as much life in it as a building brick.

The fact is that History is a living subject which involves people of all walks of life. By involving the pupil in the subject, it becomes live and interesting, and software uses the adventure concept to achieve this goal.

The disk contains two packages covering different aspects of the same problem. The main portion relates to an investigation of the past. The pupil has to "travel" around seeking information which will help solve a Victorian murder. To achieve this aim, you must examine a wide range of sources of information such as

records, diaries, memorials in churches and listen to the gossip.

In the first part you have to compile the basic facts from archival material. You have access to contemporary material in the second part, and with this you attempt to form a case against the murderer. Two further parts provide further information and quiz your findings.

In the second package, the pupil has to explore a Kentish village and map it. The final aim is to compile as much information as possible about a family that lived there.

Overall, the main theme of the package is that there is a lot of material available which is used to explore the past and shows where it is found and how it can be used. The software is detailed and well thought out – the documentation is copious and extremely useful; providing teacher's notes and help for the pupils. The material is ideal for project work, both for groups of children and the individual. I believe that this software

is free provided that a blank disk or tape is sent.

Revision Series

Finally, I received some sample extracts from a series, written by Software Horizons, whose software is very much of the subject summary/revision genre. The system uses a kernel of routines which perform some fixed actions on a database. The database is specific to each subject. The format is text only with choices made from menus.

Each topic has a block of notes occupying two or three screen loads, which must be read in conjunction with normal notes. There are then a number of questions aimed at testing the pupil's knowledge. These are:

Single question: these simply require a typed answer to a question.

Multiple choice: three possible answers are given for the pupil to choose from.

True or false

Group questions: answers are chosen

from a given selection to answer a group of questions.

Time test

Fill in paragraph: the pupil has to insert the missing keywords into a paragraph.

A nice touch is the program's ability to tolerate minor deviations in spelling. Overall this package does its job well, but due to the lack of graphics, is rather unexciting.

Touchline:

PIRATES!

CHASE FAME & FORTUNE ON THE HIGH SEAS

The Action-Adventure Simulation

Pirates! The world's first swashbuckling simulation.

Non-stop action and historical drama take place on the Spanish Main during the 17th century and you play the leading role – Privateer Captain, a pirate in all but name.

Leap into this era of turbulence and change – a time when daring adventurers can gain power and wealth.

Raid treasure-laden galleons and plunder rich ports. Learn to navigate, to fence and to avoid mutiny.

Uniquely, *Pirates!* combines the excitement of an adventure story with the challenge of simulation decision-making. You must choose the most lucrative expeditions, forge the most fruitful alliances and

negotiate the greatest profits.

Success will determine your status in later life. How will you end your days? A prosperous noble or common scoundrel?

Pirates! will be landing in all good software stores soon.

Win a Konix Joystick

Konix is set to launch a new joystick onto the market. We're giving ten away as prizes in this month's competition.

The Konix joystick is probably the one of the best known joysticks available. Now Konix is set to take the market by storm once again with a new version of the joystick, now with an auto fire facility.

Your Commodore is pleased to team up with Konix for this month's competition. We are giving away ten auto-fire joysticks to the first ten correct entries pulled out of the hat after the closing date.

How to Enter

Study the two cartoons, there are a number of differences between them. Once you have decided how many differences there are complete the entry coupon and send it to the editorial address (see below). Please write the number of differences that you have found on the back of the envelope. If you don't then your entry will not be accepted.

The Rules

Entries will not be accepted from employees of Argus Specialist Publications and Konix. This restriction also applies to employees' families and agents of the companies.

The How to Enter section forms part of the rules. The Editor's decision is final and no correspondence will be entered into.

£29.95

C128 HELPER

THE FIRST ELECTRONIC C128 REFERENCE MANUAL

The C128 HELPER is the first electronic reference manual for your C128. If you have ever found yourself in the middle of programming and needing information, this is the utility for you. Let's say you are programming in powerful BASIC 7.0 and you need help. Touch the 'Help' key and a menu appears instantly. Select the required help from the menu and you get a full screen of information and examples. Touch another key and its printed out. Then you are returned to your BASIC programme. The C128 HELPER works in 80 column mode and with the 1541/1570/1571 and 1581 drives and is co-resident with your BASIC programs and all BASIC 7.0 commands and functions and available with full explanations and examples. It also allows you to perform a screen dump from BASIC. Perhaps the single most exciting point is that the program is user-definable. You can edit HELPER or create your own custom files. You are guided with prompts to construct your own screens and menus. You could make your own electronic pads or helpers for other programs. The list is endless.

Only £24.95

All our programs are available in 3.5" format (£1.00 extra) Foreign orders please add £2 to total cost of software. Otherwise prices include VAT and post. Send S.A.E. for list of ALL our 128 products-**THAT'S ALL WE SELL!**

A Powerful Wordprocessor for the Commodore 128®

Selected
for the 1987
CES Software
Showcase
Award.

From the author of **Fontmaster II** comes **Fontmaster 128**, an enhanced version for the Commodore 128. This powerful word processor with its many different print styles (fonts), turns your dot matrix printer into a more effectual tool. Term papers, newsletters, and foreign languages are just a few of its many applications.

- ★ Program disk with no protection - uses hardware key
- ★ Supplement disk includes foreign language fonts
- ★ 56 Fonts ready to use
- ★ Font editor/creator included
- ★ On screen Font preview
- ★ 80 column only
- ★ Supports more than 110 printers

★ Includes a 102,000 word Spell Checker

★ Insert graphics within text or superimpose text over them & turn this package into a Desk Top Publisher. Clip-Art disk with 110 images \$5

NEW: The Commodore 1581 3 1/2 inch - fast data transfer rate (8000 cps with the 128; 900 cps with the 64) - full CBM compatibility with the 128/64 serial drive - 6502 processor running at 2MHz for program, Sequential, Relative and C/P/M filing - MFM format. Must be a bargain at £199.95 (P&P £3). We can supply FONTMASTER 128 in 3 1/2 inch format.

★ Sole UK Importers and distributors are **BYTES & PIECES**, 37 Cecil Street, Lytham, Lancashire, FY8 5NN.

Enlarging the C64

*Create User Definable Graphics to produce enlarged
characters on your C64.*

By Adam Wright

This program will enlarge any character up to a maximum square size of 6(width) by 6(height). In fact, as long as the combinations of width and height when applied to the formula $(width-1)*8*(height)+1$ is less than 256 then other size combinations can be created. If you can take into account the massive amount of memory that is used when creating enlarged characters then I'm sure that you will appreciate that the size combinations available are very acceptable

The program creates UDG's (User Definable Graphics) which when pieced together in the correct order will produce the enlarged character. This program therefore works in the normal low-res screen mode. One advantage of this method of creating enlarged characters is that no hi-res screen areas have to be assigned. The disadvantage of this method is that the total number of characters redefined must not exceed 255. One way to overcome this limitation is to create the enlarged characters that are going to be used beforehand.

Getting it all in

In order to enter correctly the Enlarge program the following steps have to be taken:

- Enter program 1.

- Run the program making sure there are no errors.

- Save the program (SAVE "PROGRAM 1",1).*

- Save the code by typing SYS 49853 "ENL CODE",49152,49977,1*

- Enter program 2.

- Save the complete program (SAVE "ENLARGE",1*).

- *Disk Users replace the 1 with an 8

How to use the routines

Enlarge Character

This is the main routine which as its name suggests, enlarges characters. Routines that must be called before calling this routine are:

Data Store, Character Data, Width, Height

SYNTAX - SYS EC

Print Character

This routine puts the enlarged character on the screen. Note that the kernal print routine could not be used because as you well know, some ASC codes do things like clear the screen, etc, therefore the characters are 'POKED' into screen memory.

Routines that must be called before calling this routine are:

Character Colour, Base Character, XY Position, Width, Height

SYNTAX - SYS PC

Data Store

This routine is used to set up the address for the enlarged characters - (default 12288)

SYNTAX - SYS DS, enlarged character address

Character Data

This routine tells the computer where the 8 bytes of character definitions are - (default 14336)

SYNTAX SYS CD, character definition address

Character Colour

This routine simply changes the current enlarged character colour.

SYNTAX - SYS CC, colour of character

Basic Character

This routine changes the initial character that is used as the base for the Print Character routine. (See example 1)

SYNTAX - SYS BC, base character number

XY Position

This routine changes the enlarged character coordinates.

(Not to be confused with *CURSOR MOVE*)

SYNTAX - SYS, XY, X coordinate, Y coordinate

Width and Height

This routine sets up the width and the height of the character to be enlarged.

SYNTAX - SYS WH, width of character, height of character

 Berkhamsted, Herts. HP4 1HL.**

screen of the VDC quite easily, but you have to remember BASIC isn't prepared for this, so you may have to write specialist routines to make this possible. First let's try to make the screen smaller horizontally by:

POKE 54784,1:POKE 54785,75

The number of characters displayed has changed to 75, but it doesn't quite work because the spare five columns are printed on the next line. So we must store five to register 27:

POKE 54784,27:POKE 54785,5

This solves the problem by adding five lines to make the total equal $75+5=80$. The maximum number of characters is 80. We can also change the number of vertical characters using register 6:

POKE 54784,6:POKE 54785,10

No problems this time. The rest of the screen is swallowed up – even though it is still there if you store 25 in register 6. Now try this:

POKE 54784,6:POKE 54785,26

Wow! We now appear to have 26 lines, although they can't be used yet, and probably contain garbage. In fact we can have up to 32 lines although some monitors may not be able to display them all, so it's best just to add a few. Also, if you change the size of the screen it would be useful if you could centre the display. Well, you can of course. Just use registers 2 and 7 to change the horizontal and vertical syncs respectively. It's best to experiment and I would recommend that your programs that change the size of the screen allow individual users to alter the syncs for their individual monitors.

Like the 40 column screen, the 80 column has an attribute screen, but with some added features. Each of the 2000 bytes (see fig six) affect the corresponding byte of screen RAM, the individual bits mean:

(see Figure 11)

Alt: indicates which character set is in use.

Rvs: Reverses characters, but not used by KERNAL.

Und: Is used to underline characters (CTRL B).

Fla: This bit flashes characters on and off.

Bits 0 – 3 are used for the sixteen colours.

It is also possible to change the position of the screen and the

Figure 5

Copying the VDC RAM from place to place. Store the destination address at 250 and 251, the number of bytes in Acc. Also, store the source address in 252 and 253.

.copy	PHA	/temp store number of
	LDX #24	/bytes then set
	JSR read	/copy
	ORA 128	/bit
	JSR write	/and write.
	LDX #18	/store
	LDA 251	/destination
	JSR write	/address
	INX	/high
	LDA 250	/then
	JSR write	/low.
	LDX #32	/store
	LDA 253	/source
	JSR write	/address
	INX	/high
	LDA 252	/then
	JSR write	/low

	LDX #30	/of bytes
	JSR write	/and store
	RTS	/return

Figure 6

VDC RAM organisation

\$0000	– \$07CF	Video RAM, 2000 bytes.
\$07D0	– \$07FF	Not used.
\$0800	– \$0FCF	Attribute RAM, 2000 bytes.
\$0FD0	– \$1FFF	Not used.
\$2000	– \$3FFF	Character RAM, 8192 bytes, two character sets, 16 bytes per character (8 not used).

Figure 7

Altering underline scan line.

```

10  graphic 5,1
20  for t=0 to 24
30  char, 24,t,chr$(2)+"How to under line text
    on the VDC"
40  next t
50  do
60  :for t=1 to 8
70  :poke 54784,29:rem "register 29"
80  :poke 54785,t
90  :for d=1 to 25:REM "delay loop"
100 :next d
110 :next t
120 loop

```

attributes, as long as you tell the interpreter, which gets the information from around about \$A2F in zero page. You will need to do this if you enlarge the screen. You change these via locations 12 and 13 (screen), 20 and 21 (attributes) of the VDC.

For those proud owners of monochrome monitors you can do away with the attributes altogether and use register 26 for the foreground and background colours. To do this you must clear bit 6 of register 25: POKE 54784,25:POKE 54785,7

No difference? Well, not yet, but try the program from figure eight. Removing the attributes also allows you to utilise more memory for anything else.

Another feature of the VDC is the ability to change the size of the characters. This could be used as a special effect or just to amaze your friends! The registers controlling the size of the characters are 22 and 23 (bits 0-3). However, at present the system can only display up to a maximum of 8 by 8 pixels. But there are 16 bytes per character in the RAM so does this mean that a larger grid is possible? Try this:

```
1 POKE 54784,9:POKE 54785,15
2 POKE 54784,6:POKE 54785,16
3 POKE 54784,23:POKE 54785,15
4 POKE 54784,4:POKE 54785,19
5 POKE 54784,7:POKE 54785,18
RUN
```

So, it is possible to display an 8 by 16 grid, but what about 16 by 8. I'm afraid I haven't figured out how to do this, and I don't think it's possible.

Remember smooth scrolling on the VIC, well it's also possible on the VDC, using registers 24 and 25 for vertical and horizontal scrolling respectively. Notice that 16 bits can be scrolled in the horizontal plane. If bit 4 of register 24 is set then only 22 lines (as opposed to 25) are displayed so you can scroll the next three on. Also, you don't lose lines when scrolling on the VDC, try the program in figure nine.

The cursor is, as mentioned before, controlled by the VDC and has several registers controlling it, namely 14, 15, 10 and 11. Registers 14 and 15 define the address the cursor is at. Register 10 bits 5 and 6 indicate the cursor mode: 00 - The cursor is still. 01 - The cursor is off. 10 - Fast blinking. 11 - Slow blinking.

Bits 0-4 indicate the top line of the cursor, because you can define it as underline, overline, solid, or anything you like. Register 11 defines the end

Figure 8

Changing the character size.

```
10 graphic 5,1

100 :for d=1 to 60
110 :next d,t
120 loop
```

Figure 10

The cursor mode.

```
10 fast
20 poke 54784,11:poke 54785,5
30 for m=9 to 96 step 32:rem "bits 5 and 6"
40 poke 54784,11:poke 54785,2+m
50 for x=0 to 79
60 poke 54784,14:poke 54785,0
70 poke 54784,15:poke 54785,x
80 for=1 to 20:rem "change delay to suit yourself"
90 next d,x,m
100 end
```

scan line. Both are from 0 to 15. See figure 10 for an example of the cursor modes.

And now we come to the highlight of this article. Want to know a secret? **HIGH RESOLUTION GRAPHICS!** Yes, bit 7 of register 25 defines text or graphics mode and normally the hi-res mode is 640 by 200. This is comparable to the BBC mode 0 graphics, and is quite impressive. However, you will have to write your own graphics routines as Commodore forgot, although I saw a package at a Commodore show which could handle hi-res graphics in 80 column mode. Try this:

```
POKE 54784,25:POKE 54785,135
```

However, if you want to use 16384 bytes instead of 16000 then try this:

```
1 POKE 54784,1:POKE 54785,64
2 POKE 54784,2:POKE 54785,96
3 POKE 54784,6:POKE 54785,32
4 POKE 54784,7:POKE 54785,36
5 POKE 54784,25:POKE 54785,135
```

This gives graphics of resolution 512 by 256. I use this a lot more because you can use a technique used on the BBC. Remember registers 12 and 13? Append this to the above program:

```
6 DO
7 FOR T=0 TO 63 STEP 2
8 POKE 54784,13:POKE 54785,T
9 FOR S=0 TO 49:NEXT S,T
10 LOOP
```

What this program does is move the start of the screen, and as the screen takes exactly 16K bytes then it will wrap around in memory. This is a great feature and scrolling becomes easy. The procedure would be to change the start of the screen instead of scrolling memory, which makes scrolling easy and quick. Also, if Commodore had thought to give the VDC some more memory (quite possible), say 32K bytes then it would have been possible to have displayed 640 by 400 or 512 by 512 pixels resolution using the interlaced graphics mode on register 8. Try poking 255 to this register!

Well, that's all I have to say about the VDC, and I assure you that there is a lot left to find out, and special effects to find. One final possibility that I thought about was to use the 16K bytes as storage for music data, etc. Also, you can use the VDC in 64 mode (as well as the 2 MHz mode). For other information on the VDC refer to one of the good C128 reference guides or *The Anatomy of the Commodore C128*.

Figure 11

A complete list of the VDC registers.

0	:	(126)	:total number of characters/line including beam return.
1	:	(80)	:Number of characters displayed across screen.
2	:	(102)	:Left border sync. Increasing this register moves the screen left.
3	:	(73)	:Sync width. Bits 0-3 determine hor. sync pulse width in characters, bits 4-7 determine vert. sync pulse width.
4	:	(39)	:Total number of lines including beam return.
5	:	(224)	:Fine adjustment for register 4.
6	:	(25)	:The number of vertical lines displayed.
7	:	(32)	:Upper border sync. Increasing this moves the screen up and decreasing it moves the screen down.
8	:	(252)	:This register determines the interlace mode.
9	:	(231)	:Bits 0-4 determine the number of raster lines/character minus one. The default is 7 (bits not used appear as 1) meaning 8.
10	:	(160)	:Bits 5-6 set cursor mode and bits 0-3 set cursor start raster.
11	:	(231)	:The line at which the cursor ends is held in bits 0-4 (normally 7).
12	:	(0)	:The high byte of the address of the screen.
13	:	(0)	:The low byte of the address of the screen.
14	:	(???)	:The high byte of the cursor position.
15	:	(???)	:The low byte of the cursor position.
16	:	(???)	:The vertical address of the light pen.
17	:	(???)	:The horizontal address of the light pen.
18	:	(???)	:The high byte of the address to be copied, written to or read from.
19	:	(???)	:The corresponding low address of REG 18.
20	:	(8)	:The high byte of the attribute screen.
21	:	(0)	:The low byte of the attribute screen.
22	:	(120)	:Bits 4-7 determine the number of displayed horizontal lines (7). Bits 0-3 determine the number of vertical displayed lines (8).
23	:	(232)	:Number of vertical lines displayed (height)
24	:	(32)	:Bit 7 tells VDC whether copying, reading or writing. Bit 6 is the REVS bit, used by <ESC> R and <ESC> N. Bit 4 swallows up the last three lines of text on vertically. Bits 0-3 are used for vertical scrolling.
25	:	(71)	:Bit 7 indicates high or low res. mode. Bit 6 indicates the use of attributes. Bit 5 determines semi-graphic operating mode. Bit 4 indicates double width characters. Bits 0-3 are for horizontal scrolling.
26	:	(240)	:When in monochrome mode (bit 6 of REG 25), bits 0-3 determine background colour, and bits 4-7 indicate foreground colour.
27	:	(0)	:The number of characters added to the end of each line. If you make the screen smaller you must make sure REG 1+REG 27=80.
28	:	(47)	:Character base address (bits 5-7) in 8K steps.
29	:	(231)	:Indicates which line to underline, and can be from 0-15.
30	:	(???)	:Number of bytes to be copied or stored.
31	:	(???)	:Holds data for reading or writing to RAM.
32	:	(???)	:High byte of start address of block to copy
33	:	(???)	:Low byte of start address of block to copy
34	:	(125)	:Number of characters from start of line to first character to be displayed. Can be used to cover left edge of screen.
35	:	(64)	:As REG 34 but for right edge of screen.
36	:	(245)	:Bits 0-3 indicate the DRAM refresh rate.

Cut Price Disks from Direct Disk Supplies

Array Display Subroutines

Create a screen input and display routine which acts on string arrays, with this handy program.

By Paul Williams

When writing business packages or other programs for serious applications, it is often necessary to have screen layouts containing a lot of data all at the same time (for example one record in a database program or the description of one item in a stock control package).

The best way of entering and modifying the data is for the user to be able to move a cursor around the various fields on the screen, using the screen editor to amend the data. However, the cursor must not be allowed to stray outside each field, otherwise it would be very easy for the user to corrupt the screen, and if the user were not familiar with computers, become very confused.

The program described here is a screen input and display routine which acts on string arrays, providing the following advantages over the normal Basic INPUT command, while still being easy to use.

1. The programmer defines the field positions and sizes on the screen, and it is impossible for the user to stray out of these fields when editing.
2. When editing, the current field is highlighted to show the user the maximum size of entry expected by the program.
3. Left and right cursor controls, home, clear and insert and delete can all be used when editing, but only effect the current field, even if other fields are present on the same screen line.
4. Up and down cursor movements automatically move the user to the previous and next fields on the screen.
5. Apart from the allowed control characters, only letters, digits and characters such as ! and % etc are accepted.
6. Quotes, commas and colons are all readily accepted as legitimate input characters, and do not cause ?EXTRA IGNORED errors.

7. The programmer can specify that editing is restricted to one particular field, or all the fields on the screen.

8. All the fields on the screen can be displayed or cleared with one command. Also, editing the whole screen is performed with just one command.

9. The whole system produces very neat screen displays, allowing editing to a professional software standard.

The program relies on three one-dimensional arrays for its operation; a field position integer array P%, a field length integer array L%, and a data array S\$ containing the information to be displayed and modified. The array names are arbitrary - you can use any letters but the two numeric arrays must be integer.

Array P% contains the displacement of each field from the top left home position on the screen, e.g. the first column on the second screen line is a displacement of 40 from the top, and the middle of the bottom line is 980. Thus, P%(1) defines the location of field 1, and P%(2) defines that of field 2.

Array L% defines the maximum length of each field - this number determines the size of the highlighted area on the screen and the number of characters strings are truncated to when being displayed by the routine. L%(1) contains the length of the first field, and so on.

It is also necessary to set L%(0) to the number of fields present on the screen.

Array S\$ simply contains the ASCII strings of data to be displayed; the routine directly modifies the elements of S\$ when editing is taking place.

Once the arrays have been defined, the subroutine is executed in this way:

SYS49152,P%(0),L%(0),S\$(0)
(or whichever array names you have chosen) displays the elements of S\$ in their respective fields.

SYS49155,P%(0),L%(0),S\$(0)

allows the user to edit the data in the fields on the screen. The user can move between fields with the cursor up and down controls, and when RETURN is pressed the data in the fields is put back into the elements of array S\$.

Editing and movement can be restricted to, say field N by P%(0)=N before the above SYS command. If P%(0)=0, editing is allowed in all the fields.

SYS49158,P%(0),L%(0),S\$(0)

clears all field areas on the screen.

The main advantage of this system over normal INPUTs is that if the user has a lot of data to enter on the screen, it is possible to get to the end of the screen, then decide the top record needs modifying, and the cursor controls can be used to skip across the fields to reach that field. The Basic program is held up until the user is completely satisfied with the whole screen; then he/she presses RETURN and all the data is returned to the Basic program in one go.

The machine code program occupies locations \$C000 to \$C326 (hex), and a Basic loader is listed. This contains checksums which will point out typing errors when this program is run. Once the program has been installed using this loader, your Basic program can make full use of the package. To demonstrate how the routine is used, a Basic program has been included which draws up a typical stock-control screen and allows full-screen editing restricted to the defined fields. The program is fully commented and should need no further explanation.

The routine is ideal for taking the struggle out of writing business-type packages - after all databases and such like can quite easily be written effectively in Basic, as long as a foolproof and easy to use input routine is available - this program provides just that!

Software for Sale

If you think that one of our programs looks very interesting, but you can't afford the time to type it in then our software service will help you out.

It's three o'clock in the morning. You sit at the computer Keyboard having just finished a marathon typing session entering one of the superb programs from *Your Commodore*. Your fingers reach for the keyboard and press the letters R, U and N. You press RETURN, sit back and nothing happens.

Everyone has probably faced this problem. When it does happen it's a matter of spending hours searching through the program for any typing mistakes. No matter how long you look or how many people help you, you can usually guarantee that at least one little bug slips through unnoticed.

The *Your Commodore* Software Service makes available all of the programs from each issue on both cassette and disk at a price of £6.00 for disk and £4.00 for cassette. None of the documentation for the programs is supplied with the software since it is all available in the relevant magazine. Should you not have the magazine then back issues are available from the following address:

INFONET LTD, 5 River Park Estate, Berkhamsted, Herts HP4 1HL.
TEL: (0447) 76661

Please contact this address for prices and availability.

The Disk

Programs on the disk will also be supplied as totally working versions, i.e. when possible we will not use Basic Loaders thus making use of the programs much easier. Unfortunately at the moment we cannot duplicate C16 and Plus/4 cassettes. However programs for these machines will be available on the disk.

What programs are available?

At the top of each article you will find a strap containing the article type, C64 Program etc. So that you can see which programs are available on which format, you will also find a couple of symbols after this strap. The symbols have the following meaning:

This symbol means that the program is available on cassette.

These programs are available on disk.

Please Note

Since the programs supplied on cassette are total working versions of the program, we do not put disk-only programs on tape. There is no sense in placing a program that expects to be reading from disk on to tape.

JULY 1987

UTILITY COMMANDS — This provides many vital commands missing from Basic 7.0 on the 128.

PLUS/4 AND C/64 CRUNCHER — Speed up your programs with these handy utilities.

PROGRAMMABLE FUNCTION KEYS — A utility to make more use of the function keys on the C64.

DISKIT 5 — A handy routine to convert memory to data statements on the C64. (Disk only.)

ARCADE ACTION — Get those sprites with these handy arcade routines on the C64.

CROSS REFERENCE — This program helps you sort out your variables on the C64.

SUICIDE RUN — A fast and stimulating game for the C64.

I enclose a cheque/postal order for £..... made payable to ARGUS SPECIALIST PUBLICATIONS LTD.

All orders should be sent to: YOUR COMMODORE, READERS SERVICES, ARGUS SPECIALIST PUBLICATIONS, 9 HALL ROAD, HEMEL HEMPSTEAD, HERTS HP2 7BH.

Please allow 28 days for delivery.

Evesham Micros

Now you don't have to put up with an old fashioned looking computer. Fit this smart & modern looking new case to your trusty '64 and it will feel like you are using a brand new computer.

- Lower key height
- Modern styling
- Easy to fit

This high quality injection moulded case really will transform your '64, so why put up with an old fashioned image, order one **now**.

"...Fitting the case is simplicity itself and should present no problem to anyone with even a rudimentary knowledge of how to hold and use a screwdriver..."

YOUR COMMODORE

THE SLIMLINE '64

ONLY
£19.95

Your '64
could look
like this

Selected Products

DISK NOTCHER. Double your disk capacity, allows you to easily & accurately cut a second write protect notch. **£4.95**

POWER PACK. Replacement power pack to suit '64. **£24.95**

AZIMATE 3000. Check and adjust CBM cassette head alignment. Easy to use. **£6.95**

MOTHERBOARD. 4 slot with either all upright or with one straight thro' for modem use, please state type when ordering. **£28.00**

XETEC SUPERGRAPHIX. The best centronics i/face for 64/128. 8K buffer downloadable fonts etc. very good. **£69.95**

DATA RECORDER. CBM compatible type. Same performance etc. as C2N/1531 but cheaper and with pause. **£24.95**

1541C DISK DRIVE. We will sell you one but why not buy an Excelsior, less money and many advantages. **£189.95**

We have a good stock of Commodore related equipment. If you don't see what you want please give us a call

THE Star NL-10 PRINTERS FOR BUSINESS

NL-10
New LOW price
includes 2 spare
ribbons FREE!
(value £13.90)

This is the class printer in its price category. The perfect choice for Commodore owners because the interface is changeable. So buy with the 64/128 cartridge then if you change computer at a later date just buy a new cartridge!

In a group test with other popular printers in the price category such as Epson, Citizen & OKI What Micro described the NL-10 as "THE ROLLS ROYCE OF THIS GROUP". Why settle for less? (Amiga users order with parallel cartridge, price includes cable).

- Auto single sheet feed
- Tractor & Friction feed
- "Front Panel" mode selection
- Interchangeable i/face cartridges
- Double & Quad height characters
- Low cost cut sheet feed
- Superb "NLQ"

SPECIAL OFFER: PRICE NOW INCLUDES DOLPHIN COPY

DOLPHIN DOS

THE EFFECT IS STAGGERING.

The established standard parallel operating system for the 64/128 and 1541 disk drive. Now in use with most of the top software houses including Gremlin, Software Projects, Thalamus, CRL Alligata, Superior etc. etc. as well as many of the top independent software programmers. The speed and efficiency is incredible, who would believe that the humble old 1541 could load 202 blocks in less than 5 secs. It is compatible with the majority of commercial software and can be switched out when necessary. One of the real pleasures of using this system is to use it with the likes of EasyScript & Superbase to speed up both the normal loading and the sequential files. It is important to point out that this is achieved using standard CBM disk format and not a special system, therefore you can still use your existing disks.

INSTALLATION

Fitting involves fitting two sub assembly boards, one in the 64/128 and one in the 1541. Normally these just plug in but some '64s need a small amount of soldering.

ONLY
£69.95

EXTRAS AVAILABLE

User port expansion card.....£14.95
Kernel for 128 in 128 mode.....£9.95
Second drive assembly.....£44.95
Dolphin Copy (selection of copiers includes very powerful nibbler, extra fast unprotected and selective file).....£7.95

SOME OF THE FEATURES

- LOAD speed 25x normal (PRG)

- LOAD speed 12x normal (SEQ)
- SAVE speed 8x normal (SEQ)
- LOAD/SAVE 3x normal (REL)
- Easy & fast DOS commands
- Format 40 tracks (749 blocks)
- Monitor built in
- LOADs 202 blocks in 5 secs
- Enhanced screen editor
- Drives centronics printer
- Extra BASIC commands
- Compatible with standard DOS
- Can be switched out

Disks Boxes

25 bulk packed DS/DD disks. With sleeves, w/p tabs and labels. Good quality & fully guaranteed. **£13.95**

25 disks + box. Disks as above plus 50 capacity locking storage box. **£22.95**

25 disks + box. As previous offer but with 100 capacity locking box. A very popular offer. **£24.95**

50 capacity box. High quality lockable disk storage. Smoked perspex top. **£10.95**

100 capacity box. Larger capacity version of above. **£13.95**

FOR SPEED, POWER AND EASE OF USE FREEZE MACHINE

Now with..
"Single part
save"
Includes..
"Freeze
Frame MkV
& Lazer II"

- **Freeze...**
Totally unstoppable Freeze facility from the originators.
- **Fast Save...**
Saves in as little as 15 seconds. Nothing else can match this.
- **Multiple Save...**
Make as many saves as you want once frozen, in different styles if you wish.
- **Ultra Compact...**
The most efficient compact? Our tests indicate this, as many as 5-6 games per disk.
- **Game Killer...**
Incorporates an effective routine to disable collision detection.
- **Independant...**
Even produces stand alone Lazer files that reload in as little as 10 seconds.
- **Ease of use...**
Always a strong feature, now even more enhanced.
- **Multi-Load...**
Standard cartridge handles many games of this type. With the utility disk even more!
- **Fast Format...**
Formats your disks in about 12 seconds.
- **File Copier...**
Built in fast copier handles files up to 248 blocks long and is really easy to use.
- **Two Fastloads...**
A normal disk turbo at 5-7 times normal PLUS the astonishing Lazer at 20+ times normal...BUILT IN.
- **Selectaload...**
Just use cursors to scroll to the program you want and press a function key.
- **Reset...**
Built in, so you can enter pokes for more lives etc.
- **Tape Turbo...**
For quick save/reload on tape.

CHILLS THE REST!

"...far outstrips the opposition on both price and performance ..."

Commodore Review

"...the most exciting and lightning fast I have ever used..."

Commodore Computing International

Why Freeze Machine?

This is the latest and most effective backup cartridge from Evesham Micros, the originators. It's speed of operation is the staggering feature. Imagine being able to SAVE & reLOAD your favourite games in as little as 10 seconds and no more than 18. No other "device" can remotely match these figures...remember these facilities are built in. Buy the "Freeze Machine" and see it perform, if you don't agree that it is the most formidable cartridge available return it within your statutory 28 days for full refund, we are that confident.

UPGRADES

MkI, II, III, IIIB....	£ 19.95
MKIV.....	£ 7.95
Lazer.....	£ 2.00

**FREEZE
MACHINE
Strikes Back**

Freeze Machine Utility Disk V3.0

Latest version of the disk that complements the use of the Freeze Machine. Includes well over 30 routines. Allows the complete transfer to disk of many programs that load extra parts as the game progresses (the ones the standard cartridge cannot handle). Includes many of the latest popular titles like Last Ninja & Gunship plus many "standards" like World Games & Supercycle. A very useful add-on to your Freeze Machine.

Upgrades: £ 2.00

ONLY £ 7.95

QUICKDISC + Disc Disector V5.0 DOUBLER

Our highly popular fast load/save plus utility cartridge has received many favourable reviews.

- FAST LOAD (5-7 times faster)
- FAST SAVE (5-7 times faster)
- FAST FILE COPY (up to 248 blocks)
- RESET BUTTON (unstoppable)
- DRIVES CENTRONICS PRINTER
- FAST FORMAT
- FAST DISK BACKUP
- EASY DOS COMMANDS
- HELP MENU
- 128 COMPATIBLE ('64 mode)

only
£ 19.95

1541 Quiet Stops

Cures the dreaded 1541 drive "hammering"!!

- EASY TO FIT
- DETAILED INSTRUCTIONS
- ONE KIT DOES TWO DRIVES
- HELPS PREVENT ALIGNMENT PROBLEMS

Not suitable for "turn lever" type drives

only
£ 4.95

Our well established and extremely popular disk backup/utility package. The powerful nibblers can produce backups of most protected software. Also includes many parameters for difficult to copy software. This latest version will handle many titles by Hewson, Ocean, Domark & U.S. Gold that rival products can not. Beware of American & German copy programs that will not handle the popular British titles.

INCLUDES THE FOLLOWING

- EVESHAM 3 MINUTE NIBBLER
- EVESHAM 8 MINUTE NIBBLER
- MANY PARAMETERS (the vital code for the protection schemes)
- DUAL DRIVE NIBBLER
- MENU MAKER
- DISK ORDERLY
- DISK RESCUE
- UNSCRATCH
- DISCMON+
- ETC., ETC.

only
£ 19.95

The whole package is easy to use and menu driven. Works with '128 in '64 mode and most routines 1570/1 compatible. Perfect operation with Excelsior+.

THE Tape Backup "device"

Many thousands of this popular product have been sold and still sales flourish. Why? We think because it is the best product of its type. It consists of hardware and software and uses a unique method, controlled by the software, that will allow you to make a perfect backups of your tape software.

- EASY TO USE
- VERY SUCCESSFUL
- USES TWO CBM TYPE DATA RECORDERS

only
£ 12.95

1541 Physical Exam

Does your 1541 suffer from...

ALIGNMENT PROBLEMS

If so you need this package. Contains digital alignment disk and drive fault diagnosis software that allows you to both check and correct head alignment & speed.

- CHECKS ALIGNMENT
- CHECKS SPEED
- CHECKS BELT & CLAMPING
- DETAILED INSTRUCTIONS
- INCLUDES QUIET STOPS

only
£ 39.95

C64 Tape System

Provide a menu driven access to multi-program library tapes with this handy program.

By Richard Kyme-Wright

Have you ever put more than one utility or backup program onto a single tape? Have you then forgotten to note the tape counter setting at the start of the second program and had to fish around on tape looking for it?

Unless you are one of the chosen few, or you rigidly use one tape per program, this utility is for you.

The program offers a selection menu of the titles of programs stored on the tape. When a selection has been made, the tape will be spooled to the start of the selected program and the LOAD sequence commenced.

The difference between this tape-accessing system and any other I have encountered is that there is no need to REWIND the tape to the beginning for a fresh look at the menu. This menu occurs between the programs so that it is ready to use at any time.

Tape Layout

When you have loaded a program the tape stops at the end of that program and before the start of the next. This is the perfect spot to find a menu. From this menu, any other point on the tape can be reached by spooling fast forwards or using rewind. A menu is also placed at the start of the tape to act as a 'registration' point that you can easily find if you do manage to get lost.

Limitations

The C64 tape system is only effective when a tape is being used as a library for your routine, programs and utilities. These programs must all be set up on the tape before the tape system is added. To change the content of the tape or to update a program involving a change in its length would corrupt the layout on the tape and a new tape would have to be set up.

The system can accommodate as many programs as the tape can hold. During the setting up, however, the more programs you have assembled onto a tape the greater the number of

spool-time intervals to be measured will be, and the necessary increase in data statements will make the menu program longer in size and take longer to load.

The spooler has been compacted to occupy a minimum number of bytes (2444 bytes for the six title version.) This takes 65 seconds to load normally but can be cut to as little as ten seconds when using a turbo-save program or utility cartridge. (Ten seconds to "load" when I use Final Cartridge II.)

The spooler will close off by instigating the normal loading commands of the C64 when the tape has been spooled to the correct position. The method of calling the next program can be tailored to meet individual program requirements. See Figure 1 for details of this.

Setting up the tape

Type in and "save" the two programs listed here. Note that these are two separate programs and not two parts of the same one.

Place a good quality audio cassette in your 2N cassette unit and reset the counter to 000. Use fast forward to advance the tape past the leader strip; give yourself some spare tape at the start so stop it at a counter reading of, say, "030". There should be enough tape spooled to save the "timer" or "spooler" programs at the start of the tape and not run past this point. At "030" save the first program in your library. Note the counter value at the end of the "save" then use "play" to move the tape forward for "70" seconds to leave a space to save the spooler later.

Use an appropriate shorter time interval if you are utilising a fast-save utility. The tape is now at the start point for the next library program. Build up your tape in this manner until you have the required number of programs on the tape, and leave enough room at the end of the tape for a final spooler program.

Now I recommend that you rewind

the tape, reset the counter and load each program in turn. Check that the programs load alright and that the counter values agree with your notes. Note that the true start point for each program will be 70 seconds (or less) beyond the end of the previous program and not at the point where your C64 announces to you that it has found something.

You now have all the information you need to measure the time it takes the cassette drive to spool between any two of the start settings.

Running the timer program

The TIMER program has to be saved at the very start of the tape. Instructions on its operation are displayed as you go along. Proceed as directed and make the necessary notes on the spooling times chart. Remember, read the tape counter while the tape is being spooled, press space bar as it approaches the required value as the tape will overrun slightly when switched off. This will take a little practice to get right.

Use the chart layout as suggested in Figure 2 to avoid getting lost between the different programs on the tape. Record the timer values obtained from a rewind as negative values and those from fast forward as positive values. Note that the last line of the chart is set with all negative values. This records the rewinding time to reach the start point of each program from the forward end of the tape. This point is 70 seconds of 'play' time (or less) beyond the end of the last program. Make a record and refer to Figures 2 and 2.1 for more details.

Setting up the spooler program on the tape

When your chart is complete LOAD the spooler program (do not RUN it as it will reset itself with NEW when it finishes). List out line 16 and replace

the text found within the quotation marks with the general title for this tape. (Overtyping the text then press RETURN). Do not use the INSERT or DELETE key as the layout of the screen would be corrupted.

Overtyping the text in the data statements beginning at line 74 with your program titles in their order on the tape. This is the point where you can tailor the spooler program to the actual contents of your tape.

If the number of titles is six or less use lines 74 to 80 as given in the listing. Type in all six titles or, if less than six, put in spaces of text on the unused data lines. Select the appropriate method of loading each program from the chart in Figure 1, and put the relevant code into each title line after the comma. Take the first line of numbers from your chart of spool times and type them over the "+0000"s in line 80.

Your data lines should look like this for four titles:

```
74 DATA" 1: PROGRAM TITLE ONE ",1
75 DATA" 2: TITLE OF PROGRAM TWO ",2
76 DATA" 3: HERE IS PROGRAM THREE ",2
77 DATA" 4: PROGRAM FOUR ",1
78 DATA" ",0
79 DATA" ",0
80 DATA+0000,+0540,+0732,+1355,+0000,+0000
or this for six titles:
74 DATA" 1 PROGRAM TITLE ONE ",1
75 DATA" 2 TITLE OF PROGRAM TWO ",2
76 DATA" 3: HERE IS PROGRAM THREE ",2
77 DATA" 4: PROGRAM FOUR ",1
78 DATA" 5: THE FIFTH PROGRAM ",3
79 DATA" 6: PROGRAM NUMBER SIX ",1
80 DATA +0000,+0540,+0732,+1355,+1760,+2321
```

If more than six titles are required use line 79 (item six) for the NEXT SELECTION option and set the code at the end of the line to '8'. (This triggers the program to the next page of titles.)

Retype the data lines as in lines 74 to 80 starting with the new line number of 81.

Item six must again be the NEXT SELECTION option and if this is the last page, set the code at the end of the line to '9'. This makes the display revert to the initial selection.

```
74 DATA" 1: SOUND CREATOR ",2
75 DATA" 2: SOUND MAKER ",3
76 DATA" 3: SOUND SEQUENCER ",2
77 DATA" 4: MUSIC THEMES ALBUM ",1
78 DATA" 5: MUSIC HITS,ALBUM ",1
79 DATA" 6: -----▼ NEXT LIST ▼",8
80 DATA-7650,+0000,+0100,+1630,+2410,+0000
81 DATA" 1: MELODY TIME, POP HITS ",1
82 DATA" 2: SYNC. SYNTH. CLASSICS ",1
83 DATA" 3: TUNES FOR YESTERDAY ",2
84 DATA" 4: TUNES FOR TOMMOROW ",2
85 DATA" 5: TUNES FOR TODAY ",2
86 DATA" 6: -----▼ NEXT LIST ▼",9
87 DATA+3170,+3920,+4670,+5210,+5880,+0000
```

In the second example I have gone a stage further and used eleven titles spread over three pages!

```
74 DATA" 1: SOUND CREATOR ",2
75 DATA" 2: SOUND MAKER ",3
76 DATA" 3: SOUND SEQUENCER ",2
77 DATA"NOTE ABOUT HARDWARE PUT HERE!!",0
78 DATA"-----",0
79 DATA" 6: -----▼ NEXT LIST ▼",8
80 DATA +0100,-0765,+0000,+0000,+0000,+0000
81 DATA" 1: MUSIC THEMES, ALBUM ",1
82 DATA" 2: MUSIC HITS, ALBUM ",1
83 DATA" 3: MELODY TIME, POP HITS ",1
84 DATA" 4: SYNC. SYNTH. CLASSICS ",1
85 DATA"-----",0
86 DATA" 6: -----▼ NEXT LIST ▼",9
87 DATA+1630,+2410,+3170,+3920,+0000,+0000
88 DATA" 1: TUNES FOR YESTERDAY ",2
89 DATA" 2: TUNES FOR TODAY ",2
90 DATA" 3: TUNES FOR TOMMOROW ",2
91 DATA" 4: TUNES THAT NEVER WERE ... ",2
92 DATA"-----",0
93 DATA" 6: -----▼ NEXT LIST ▼",9
94 DATA+4670,+5210,+3170,-1870,+0000,+0000
```

Figure 2: chart layout for recording
Timer values

Figure 1: the options available to the spooler when it hands over to the LOAD sequence.

CODE	LINE	Produces the following response	
1	60	Hold down Shiftkey and press RUN/STOP 'READY'	(use to create an AUTORUN command when loading BASIC)
2	61	LOAD"",1,1< return > 'PRESS PLAY ON TAPE'	(normal LOAD command)
3	62	LOAD"",7< return > 'PRESS PLAY ON TAPE'	(for use with programs saved using the 'freeze' or 'turbo' facilities of Final Cartridge II)
4	63		
5	64		
6	65		
7	66		

Space is available in lines 63 to 66 to define any other load variations you require.

Of course, if your list of titles continues, lines 81 to 87 will be full and the block of lines 74 to 80 can then be repeated again on new lines 88 to 94.

Here are two examples adapted from one of my own applications. In the first there are ten titles on the menu and option six on each 'page' is used to turn to the list on the next 'page' (or to go back to the first 'page').

In this second example I have gone a stage further and used eleven titles spread over three 'pages'.

It is important to note the timer values are not in sequence in lines 80, 87 and 94 as the titles have been grouped by subject and not by the position on the tape. Each timer value must correspond to the program title in the list that owns it. (Type in these data lines and run the program to see how it handles them. Change the NEW command in line 73 to a STOP command first or your experiment will involve a lot of re-LOADS.)

With the data lines set up, save the spooler program using the fast-save facility (if you have one) at the appropriate position before the start point of the first program. Next spool forwards to the end of that program, using the tape counter and your notes for guidance.

List spooler to your screen then overtype the timer values (lines 80, 87 etc.) with the second set of figures from your timing chart then SAVE spooler at the tape position you have now reached.

Continue this process until spooler has been saved between each program on the tape and once more after the last program using timer values that are all -ve.

Begin with the tape positioned at the start of one of the programs by setting the tape to the tape counter value noted for that program on the left of this chart; spool to the start point of a program listed along the top, and record the timer value displayed by the spool timer program in the appropriate box on the chart. See Figure 2.1 for an example.

This chart can be expanded to accommodate any number of programs as long as there is one column per program and one line more than the number of columns.

Figure 2.1: This is an example of the chart when partly filled in. The top and left side of the form is used for noting

Figure 2

Timer - Process Description

Line	Description of process
100	Set up background and border colours
110-210	Paint screen layout
220	Deposit character on last position of screen
230-300	Display instructions on the screen, reset the keyb'd register
310	Read keyboard character
320	If character=f1..... (EXIT)
330	If cassette 'STOP' key has been used. ...
340	If character < > space bar. ...
350-430	Paint timer box on screen
440	Set up timer reference, start spooling the tape
450	Calculate elapsed time
460-570	Display elapsed time, LOOP until space bar is pressed
580	Stop spooling the tape
590	Display prompt "PRESS RETURN TO RESET 'TIMER'"
600-630	Read keyboard character, respond to "RETURN KEY" and "f1"
640-650	Display prompt "READY FOR NEXT" and reset timer display
660-690	Read keyboard character, respond to "f1", "STOP", "SPACE BAR"
700	Reset timer value and go to line 450 (LOOP)
710	BUZZ and FLICKER error procedure
720-750	Display the error message
760	Exit from the program - END

down tape counter values for the start point of each program present.

E.g. (In this example)

The next spool time to be measured is the one between the start of program four back to the start of program two.

The tape counter should show the

number "100". Press the rewind key and then the space bar. Press the space bar again when the counter runs back past "57" to allow the tape to come to rest at "55". Note down the timer value in the box marked "????". (I get a timer value of "0390" for this one.)

The Best of 1987

Whether you are looking for a present to buy or want to treat yourself, you'll find something in our list of favourites from 1987.

By Tony Hetherington

It's been a great year for games with more American giants setting up shop on these shores. Soon you won't have to wait for the latest game from Electronic Arts, Microprose, Origins or Infocom as they'll be released simultaneously here and in the States.

This top ten has been compiled by the marks given by the reviewers of each game of the month. For a full review check the relevant copy or contact our back issues department.

California Games/EPYX/US Gold/£9.99 cass/£12.95 disk. The fifth and finest of the *games* games that started in Summer, passed through Winter and then went around the World. Now California games takes you through six sun soaked sports that feature skateboarding, foot bagging, surfing, roller skating, BMX racing and finally frisbee flinging.

Sentinel/Firebird/£9.95.

A battle of skill and strategy pits you against the energy absorbing Sentinel across a staggering 10,000 landscapes. Your aim is to get to the highest peak and absorb the Sentinel before it gets you.

The Last Ninja/System 3/£9.29.

In what must be the last word in marshal arts games you have to punch, kick and kill an increasing variety of

opponents with a growing arsenal of weapons that are strewn about the glorious graphic landscapes. If you're into combat games that get the Last Ninja; it beats the opposition.

Druid/Firebird/£7.95.

Druid was the best of the Gauntlet clones as it added the use of spells to top down scrolling adventuring. Our hero has to battle with ghosts, beetles and demons to reach chests that contain magic spells and pentagrams that replaced lost energy. When you opened a chest you were faced with a dilemma of which of the powerful spells you should choose. Should you collect more fire, water or electrical attack spells, grab a key or even the Golem, a faithful servant, that could be played by a second player? If you haven't got a copy of Druid yet, then there's no dilemma, buy one.

Gunship/Microprose/£14.95 cass/19.95 disk.

Gunship took flight simulators to new heights with a combination of an easy to fly helicopter that bristled with weaponry and an addictive gameplay that included flying over 100 missions throughout the warzones of the world. If you succeeded in wiping out enemy command posts, tanks, helicopters, gun emplacements and infantry you could gain promotions and medals and progress to more daring missions.

Stiffflip and Co./Palace/£9.99 cass/£12.99 disk.

Stiffflip and Co. brought good eggs, cucumber sandwiches and stiff upper lips to the wicket of adventures as four all round heros set off to a South American banana republic to stop some boulder destroying the world. You'll have to keep a straight bat and wits sharpened if you're to survive the onslaught from Generals and other jungle types. Some of these can be solved with fisticuffs, others will need the old thinking cap.

Repton 3/Superior/£9.95.

A boulderdash style of game in which you must collect diamonds and a golden crown to progress to the next level while avoiding plummeting rocks, hatching monsters and ghastly ghosts. A great game if you can keep your nerve. If you can't, you'll soon be given a crushing blow.

Killed Until Dead/Accolade/US Gold/£9.99.

Murder, mystery and mayhem lie in store as the Midnight murder club has just booked into the hotel where you're the house detective, and they're all out to prove that they're the world's greatest murderer. Luckily, you're the world's greatest detective and with the help of security cameras and less subtle breaking in rooms, you just might solve the 20 cases supplied on the game tape or disk.

Pirates/Microprose/£14.95.

The first ever swashbuckling simulation takes you to the high seas as you take command (fight for command) of a pirate ship. From there you sail the seven seas in search of treasures to plunder and forts to attack. You can opt to be an all out pirate and steal from any ship or instead become a privateer and serve King and country which means you plunder ships from the rest of the world. A superb simulation that's easy to get into despite the daunting task of a 90 page instruction manual!

Gauntlet/US Gold/£9.99.

The pick of the coin-op conversions that gives you 512 dungeon levels to explore as you battle with ghosts, grunts, lobbers and sorcerers. This excellent game is now just part of US Gold's Solid Gold compilation which is this month's game of the month.

FOUR FEATURED ADD-ONS.

Are you happy with your computer system or do you want to stretch it a little further? If so, here are four add-ons that *Your Commodore* has featured in the last year.

Accelerator +/Evesham Micros/£159.95.

Evesham Micros produced an alternative to the large and lumbering Commodore 1541 disk drive. The Accelerator + is smaller and slimmer, compatible with nearly all disk software, claims to be up to 25% faster and costs £40 less!

Teletext Adaptor/Microtext/£69.95.

Teletext is the information service that's broadcast alongside BBC and ITV programs. Until now you had to buy a

specially adapted TV to receive this information but thanks to the Microtext teletext adaptor you can use your C64. You can not only read the pages of news, results, reports and TV listings but also use the information in your own programs thanks to a screen reading utility.

LOAD-IT/Load-It/£19.95.

Available either ready fitted or as a kit for £10 less this little device could save you hours of anguish as you watch tapes not loading. By simply turning a graduated switch you can adjust the angle of the read head in your datasette and load in nearly all those programs that you thought were unloadable.

Epprommer 64/Datel/Electronics/£39.99.

Together with Datel's Cartridge Development system (£12.99) you can now create your own cartridges by down loading your programs onto an Eprom and then building it into a cartridge. Push your new cartridge into the C64, turn on and there's your program ready to use. With full, easy to follow instructions you can't afford to ignore Eprom programming.

BUSINESS AND UTILITIES

More and more people are using their computers for more "serious" applications either for word processing, storing information or devising amazing graphics. Here are ten programs that we have featured in the *Your Commodore* that will put your C64 to work.

Mini Office II/Database/£14.95 cass £19.95 disk.

Mini Office II is a package that represents excellent value for money as it includes a word processor, database, spreadsheet, graphing utility, comms pack and label printer all for the price of one. The menu controlled package is easy to use, fully compatible and a must for all users.

Stop Press/AMX Software/£39.95.

Available on its own or with the AMX mouse for £69.95, Stop Press is a flexible desktop publishing program that can take text from any PET ASCII file and then print it in a variety of fonts and combine it with a library of clip art. The results can then be printed out to form a newsletter or saved for later use.

Advanced Art Studio/Rainbird/£24.95 (disk).

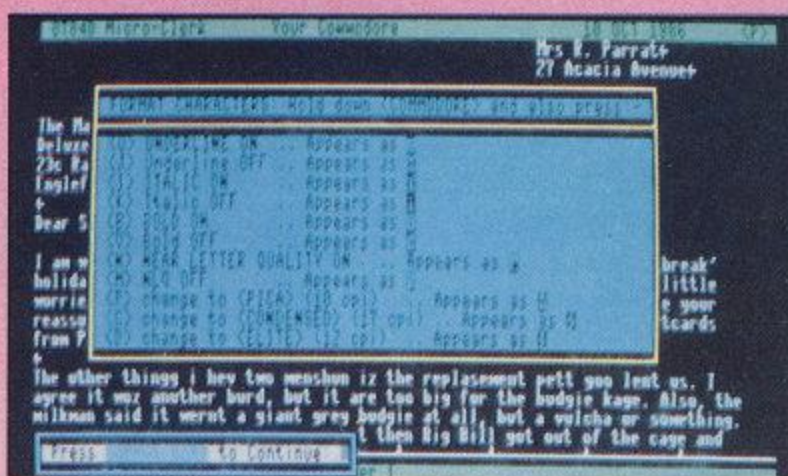

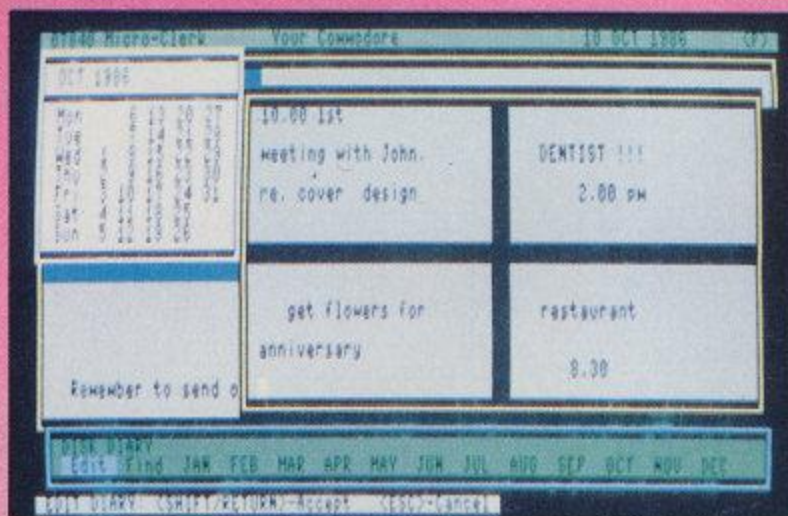

The Advanced Art Studio is the first of two graphics packages featured in this roundup. Based on the original window and pull down menus of the Art Studio, it includes added features such as support for multi colour mode, user

defined brushes that can include four colours and can be 12x16pixels big and load, and save and sized window of the screen as easy to build up picture elements.

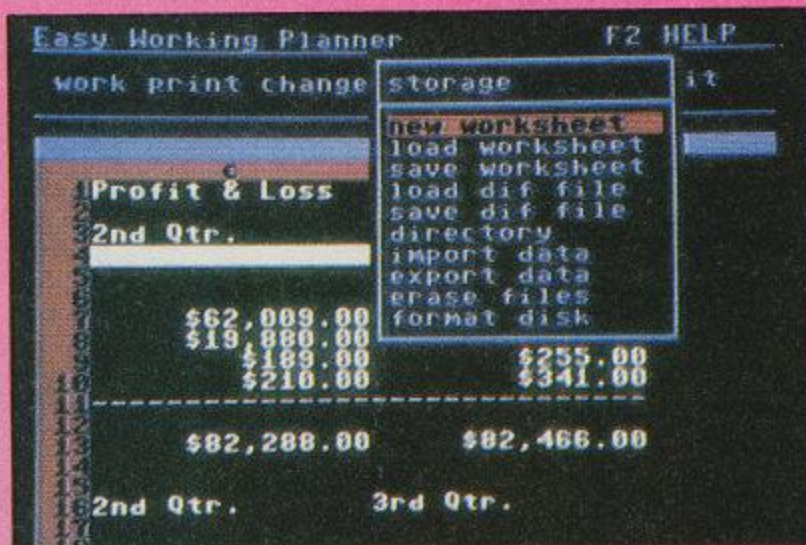

Micro Clerk/JCL/£99.99.

A combined business package for the C128 puts this machine to work and turns it into an essential workhorse for all small businesses. The package not only contains a word processor, spreadsheet, cash book and database but also can be expanded through extension packages that include a sales ledger, purchase ledger and payroll.

Logotron 1295/Logotron/£12.95 each.

A trio of packages that have been tailor made for the British market from the American Spinaker originals. Planner 1295 is a particularly comprehensive spreadsheet program and is matched by Writer 1295, and Filer 1295, both for ease of use and value for money. Could this trio become the Lotus 1-2-3 of the C64 world?

Geos Extensions/Berkley Softworks/Microprose UK/£29.95.

GEOS, the Graphic Environment Operating System, disk operating system first brought windows and icons to the C64 earlier this year. Now through a new importer the cost has come down and the original system has now been joined by Writers Workshop, Geofile, GeoCalc and more fonts and desktop utilities including a graphics grabber that can take Newsroom and Print Shop graphics.

Video Title Shop/US Gold/£14.99.

A graphics package and a screen animator combine to form

a package that can be used for anything from a title page for the video of Fred's birthday to a full advertising demo. The text and graphics are created on screen where they can be animated in a variety of ways and stored either on disk or recorded onto a video.

The Image System/CRL/£24.95.

Described as one of the best graphic programs available for the C64 the image system uses the now standard method of joystick control and has a variety of menus from which you can draw, fill and colour shapes, as well as the unusual image menu that not only allows you to save, magnify and print parts of the screen but also distort and twist the shape into any other.

Blinker-64/Information Development Systems/£29.90.

Blinker-64 is an invaluable utility for Basic programmers and allows you to write programs using existing subroutines that you have already written, tested and debugged on disk. When you've completed the program, Blinker-64 pulls in the routines and rennumbers the program and presents a full on screen report including the start and end addresses and the number of modules used.

The Toy Shop/Precision Software/£39.08.

20 working toy models that can be printed out and then built are included on one disk, along with full instruction manual and sundry extra componets such as small pieces of dowel, rubber stripping and balloons. This may sound a bit like Blue Peter and a bit pointless but it is actually great fun. This could send the paper aeroplane industry to new heights. VC

Listings

*Get it right first time with our deluxe program system
for the C64.*

You may have noticed that our listings are free of those horrible little black blobs which send you searching around the keyboard for a suitable graphic symbol. You may also have noticed the funny numbers by the side of each line of the listing. Fret no more, it's all part of our easy entry aid.

Instead of those nasty graphics and rows of countless spaces in PRINT statements and strings we use a special coding system. The code, or mnemonic, is always contained in square brackets and you'll soon learn to decipher their meanings.

For example, [SA] would mean type in a Shifted A, or an ace of spades in layman's terms, and [SA10] would mean a row of ten of these symbols.

[S+2] means hold down the shift key and press the plus key twice. It doesn't take a great leap of logic to realise that [C+2] means exactly the same thing except that the Commodore key (bottom left of the keyboard) is held down instead of the shift key.

If more than two spaces appear in a statement then this will be printed as [SPC4] or, exceptionally, [SSPC4]. Translated into English this means press the spacebar four times or in the latter case hold the shift key down while you do it.

A string of special characters could appear as:

[CTRL N, DOWN2,LEFT5,BLUE, F3,C3]

This would be achieved by holding

down the CTRL key as you press N, press the cursor key down twice, the cursor left key five times, press the key marked BLUE while holding down the CTRL key, press the F3 key and, finally hold the Commodore key down while pressing the number two key (C2 would of course make the computer print in brown).

Always remember that you should only have a row of graphics characters on your screen with no square brackets and no commas, unless something like this appears:

[SS],[C*]

In this case the two characters should have a comma between them.

On rare occasions [REV T] will appear in a listing. This is a delete symbol and is created by entering the line up to this mnemonic. Then type a closing quotation mark (SHIFT & 2) and delete it. This gets the computer out of quotes mode. Hold down CTRL and press the number nine key (RVSON), type the relevant number of reversed T's and then hold down CTRL and press zero (RVSOFF). Next type another quotation mark and delete it again. Now finish the line and press RETURN.

A list of these special cases is given in the table but remember that only one of these mnemonics will appear outside of a PRINT string: the symbol for pi. This may appear when its value is needed in a calculation so this may look something like:

:CC=2*[PI]*R:

Ignore the square brackets and just type in a shifted upward pointing arrow (ie. the pi symbol).

Checksum Program

The hexadecimal numbers appearing in a column to the left of the listing should not be typed in with the program. These are merely checksum values and are there to help you get each line right. Don't worry if you don't understand the hexadecimal system, as long as you can compare two characters on the screen with the corresponding two characters in the magazine you can use our line checking program.

Type in the Checksum Program, make sure that you've not made any mistakes and save it to tape or disk

immediately because it will be used with most of the present and future listings appearing in Your Commodore.

At the start of each programming session, load Checksum and run it. The screen will turn brown with yellow characters and each time you type in a line and press the RETURN key a number will appear on the screen in white. This should be the same as the corresponding value in the magazine.

If the two values don't relate to one another, you have not copied the line exactly as printed so go back and check each character carefully. When you find the error simply correct it and

press RETURN again.

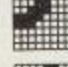

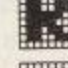

If you want to turn off the checker simply type SYS49152 and the screen will return to the familiar blue colours. You can then do whatever it was you wanted to do and if this doesn't use the area where Checksum lies you can go back to it with the same SYS command.

Lower Case

Many of the listings are presented in lower case. To turn your computer to lower case mode press the Commodore key and the SHIFT key at the same time.

Instructions for entering ROM 80

- 1) Enter the program 'ROM80.BAS'
- 2) SAVE this to tape or disk.
Do NOT RUN it.
- 3) Enter the following command:
POKE43,0:POKE44,16:POKE4095,0
:NEW
- 4) Now LOAD and RUN 'ROM80.BAS'
- 5) When finished enter the follow
ing: POKE43,1:POKE44,8:RUN

PROGRAM: ROM80.BAS

Serious Users Guide Software

Apologies to anyone who experienced a delay in receiving the software from the Serious Users Guide. This was due to technical difficulties with the disk.

It is possible that some people may have received a corrupted version of this disk. Should your disk not work correctly can you please return it to:

Omega Micro Services,
7 Graham Avenue,
Brinsworth,
Rotherham S60 5LA.

and a replacement will be sent to you.

Commodore Where Are You?

At the *Your Commodore* office we are repeatedly asked for the address and telephone number of Commodore U.K. Many people, after referring to their computer manuals, believe them

to be based in Corby.

The Commodore plant at Corby was closed down some time ago. Reproduced here you will find the correct address for Commodore U.K. We suggest that you write this correct address in the front of your computers manual for future reference.

Commodore Business Machine, (UK),
Commodore House,
The Switchback,
Gardner Road,
Maidenhead,
Berkshire SL6 7XA.

Plus/4 Extended Basic

The author of the Plus/4 Extended Basic program that appeared in our 1987 *Serious Users Guide* has provided us with a number of updates to the program. All of the alterations are

made to Listing 1. The changes are as follows:

```
86 POKE DEC("13A9"),21
100 SYS 8020"EXTENDED BASIC",
1,4097,8605
```

A number of errors also appeared in the text for this program.

The line to be added should the fast loader be used is:

```
95 IFD$="T" THEN SYS DEC
("3D00")
```

The RECORD format is incorrect. This should be:

```
RECORD CHANNEL, RECORD
[OFFSET]
```

The RECORD command also assumes that file 15 has opened as the command channel.

The DMERGE format is the same as the normal DLOAD command.

• Full of Strategic Puzzles and Problems

• Over 20 Increasingly Difficult Caverns

• Password Feature helps you to Progress

• Prize Competition for Skilled Players

• Humorous, Witty, a Barrel of Laughs

Bono The Dragon and his Flourishing Business

You are Bono, a friendly dragon residing in a picturesque sea-castle. As a shrewd business-dragon, keen on "nice little earners", you make your living by selling soap to the giant monsters who bathe in the sea surrounding the castle.

With the aid of your business partner, named Fozzy, you produce the soap by collecting skeletons amongst the castle caverns and then boiling the bones in a cauldron.

However, the castle caverns are fraught with danger: there are monsters who will kill you, spiders who will eat you alive, and glocks who will block your path. It will pay you dividends to also avoid the perilous trapdoors and hidden volcanoes.

A soap-opera not to be missed!

*It plays like a dream...
but seems like a **NIGHTMARE!***

TRAPPED — in a 1970's arcade machine! Every escape route is blocked by a wall of brightly coloured bricks. Powerfully addictive, with 200k of digitized sound, **IMPACT** has 80 built in screens plus 48 that you can design yourself — as hard, as simple, as much fun as you like. Hidden on each screen are special tokens — catch them if you can. Use them to buy one of nine powerful weapons, or keep them until the end of the screen to score a bonus.

Available now, price £14.95 for Amiga (512k min.) and Atari ST (requires 512k, mouse and colour monitor or TV).
Now released for CBM64, Spectrum and BBC (specifications vary).
Audiogenic Software Ltd., Winchester House, Canning Road, Wealdstone,
Harrow, Middlesex HA3 7SJ.
